

Clinical Experience With Corifollitropin alfa

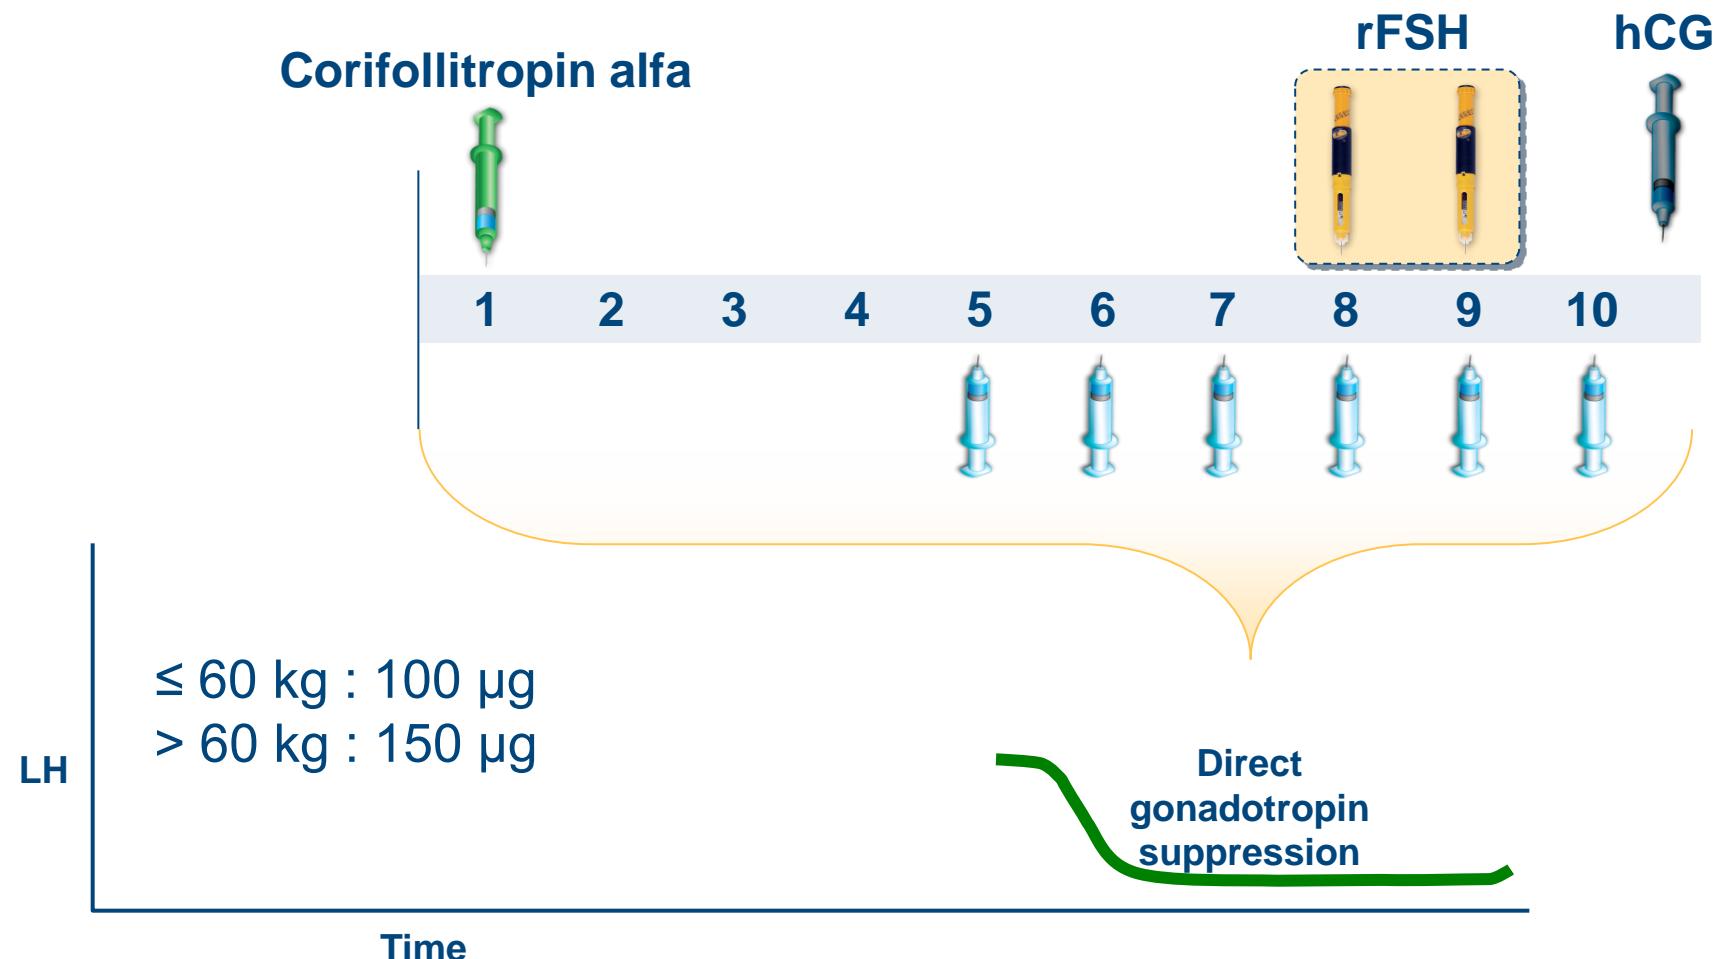

L. Cem Demirel, M.D.

Memorial Ataşehir Hospital IVF Department, İstanbul

Conflict of interest

Our team has no financial interaction with MSD company, nor has received any support for the medications used by the patients

Corifollitropin alfa

rFSH = recombinant follicle-stimulating hormone; hCG = human chorionic gonadotropin.

Inclusion criteria

- First cycle
- All infertility etiologies excluding PCOS
- AFC > 5
- D3 FSH < 10 mIU / mL and E₂ < 80 pg / mL
- Ejaculate sperm
- Age < 42

Patient and cycle characteristics

Age 33.7 (range 25-42)

Mean number of oocytes and MII oocytes retrieved / OPU 11,2 and 7,2

Fertilization rate (%) 68

Mean number of embryos transferred / cycle 1.4 embryo / transfer

Pregnancy rate per transfer % 66

Clinical pregnancy rate per transfer % 57

Ongoing pregnancy rate per transfer % 50

Specific problems of antagonist cycles

Definition

Asynchronous follicular growth

D5 of stimulation

Lead follicle ≥ 14 mm

+

the rest ≤ 10 mm

Specific problems of antagonist cycles

Definition

Asynchronous follicular growth

D5 of stimulation

Lead follicle ≥ 14 mm

+

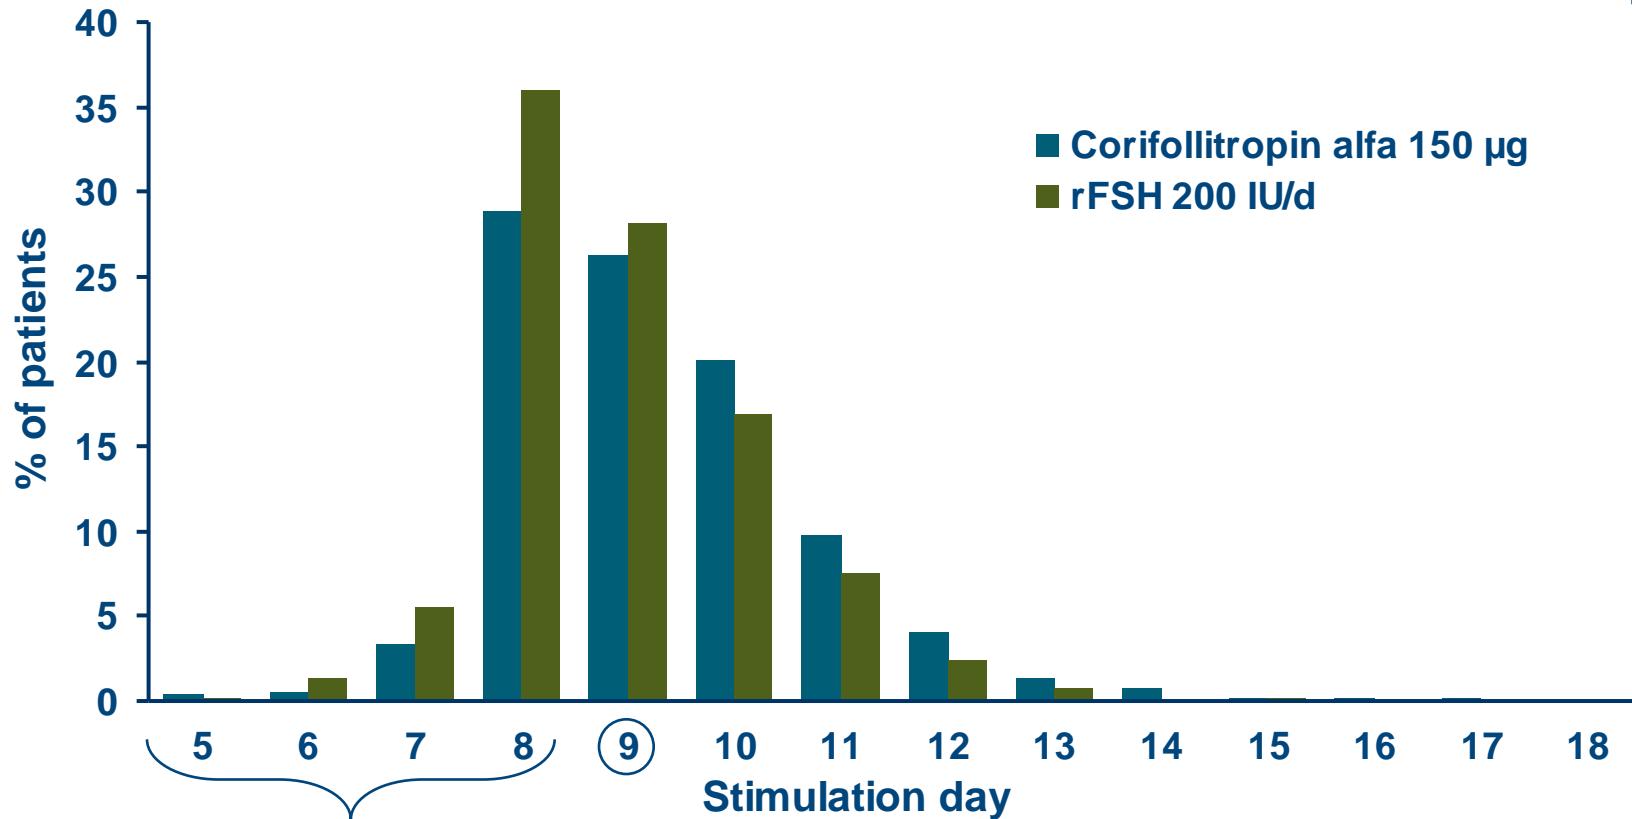

the rest ≤ 10 mm

1 in 30 cycles

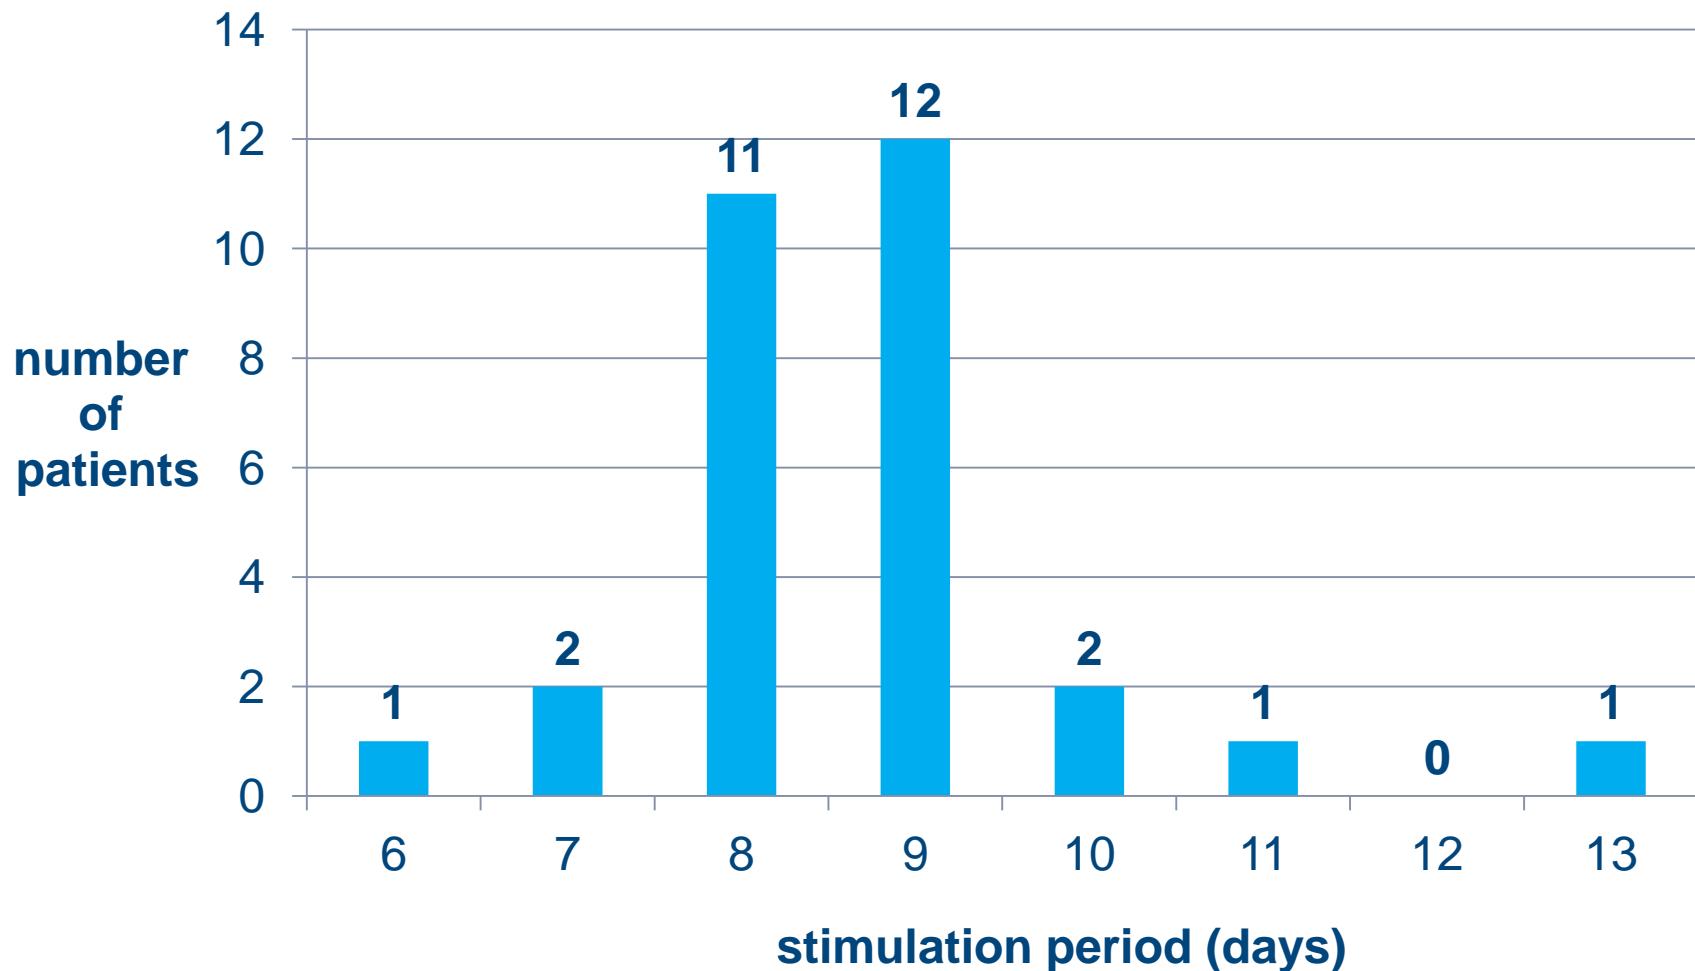

Day when hCG criteria was met

Engage

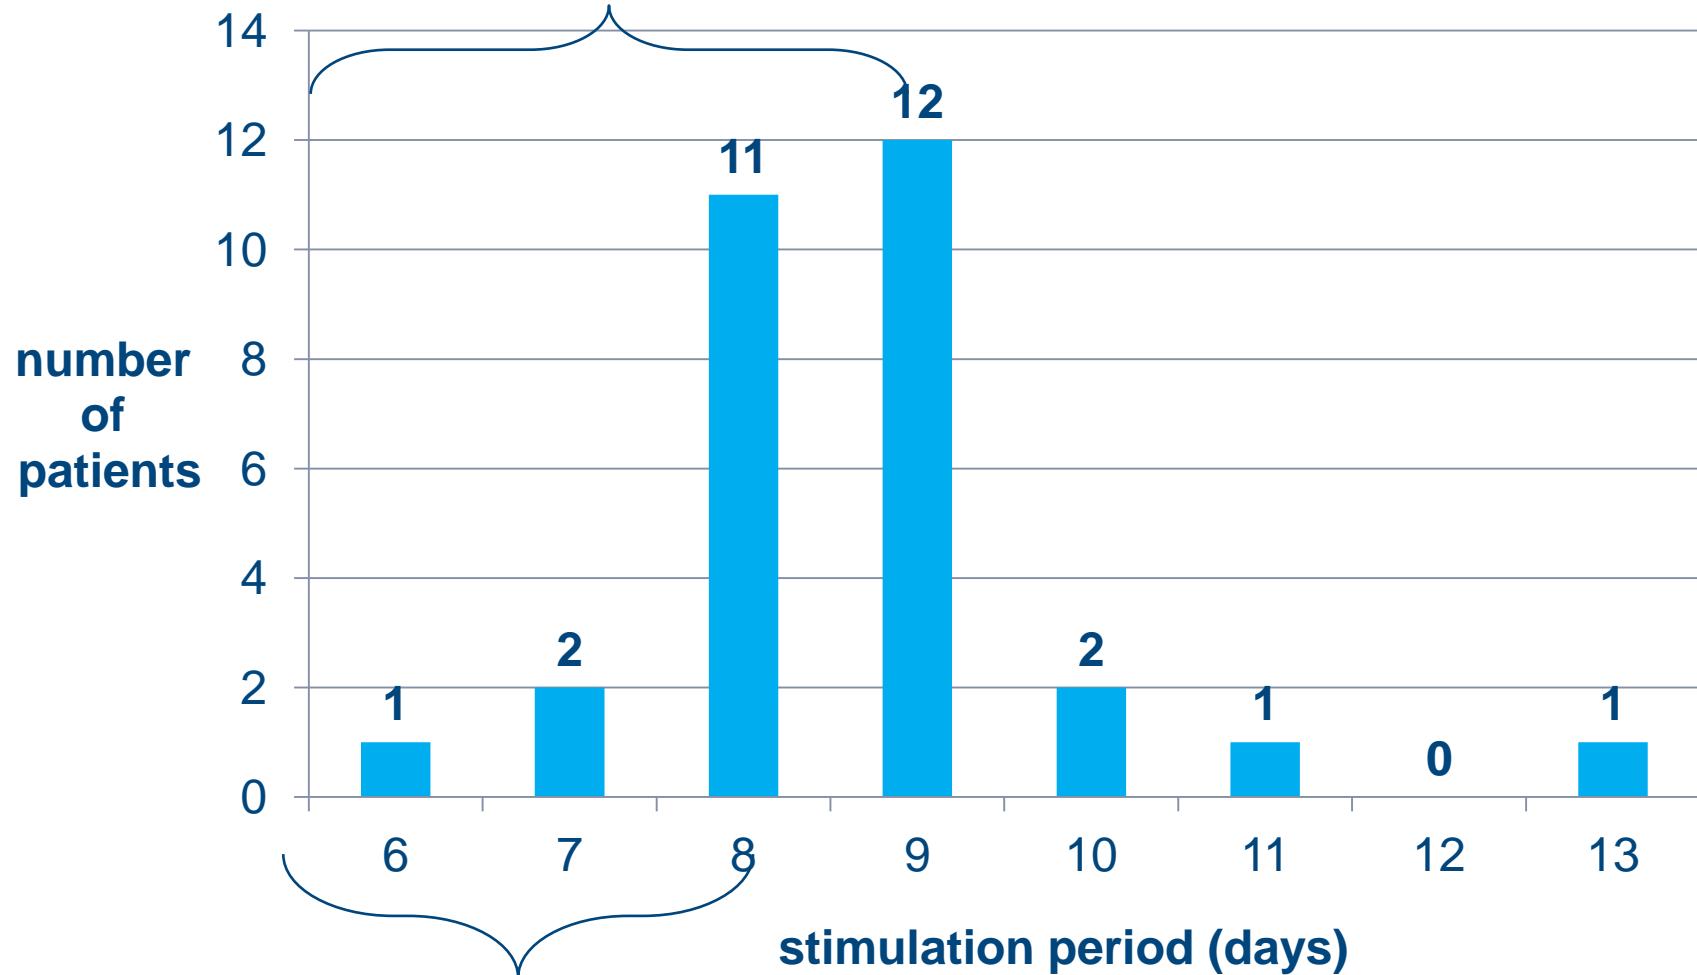

1/3 rd of patients had not required additional rFSH

How long did the stimulation last?

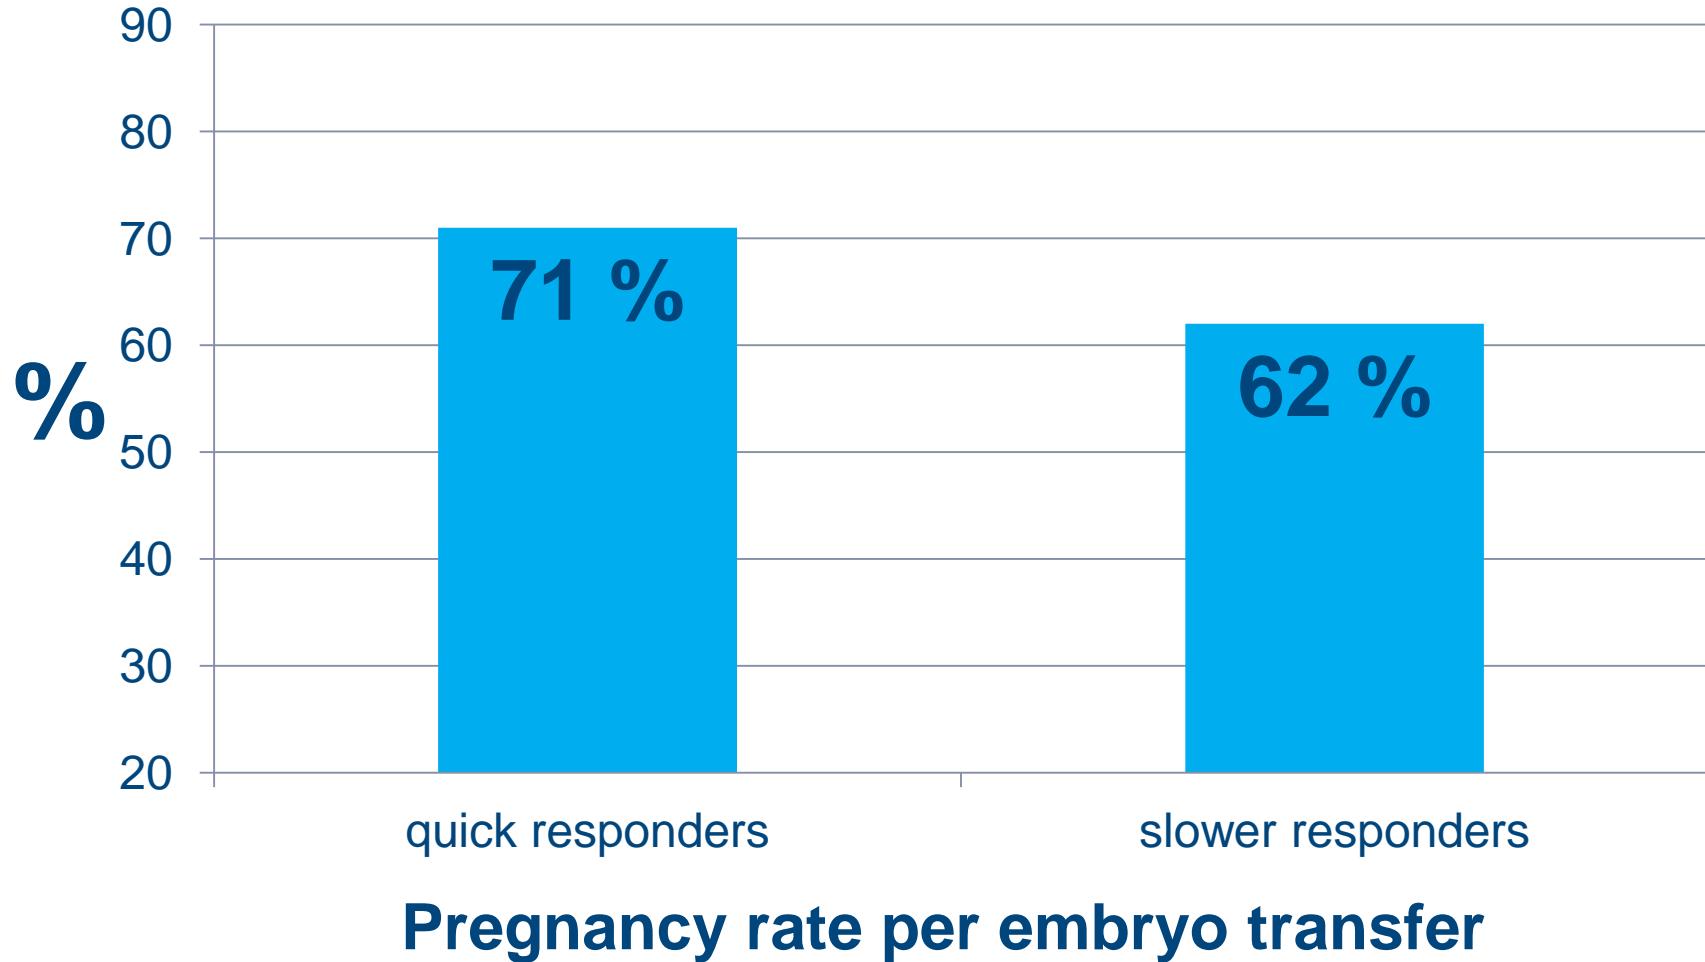

How long did the stimulation last?

% 87 completed the stimulation with a maximum of single dose

% 47 completed the stimulation without any extra dose

Did the outcome differ in cycles reaching hCG criteria with a single corifollitropin alfa shot (quick responders) ?

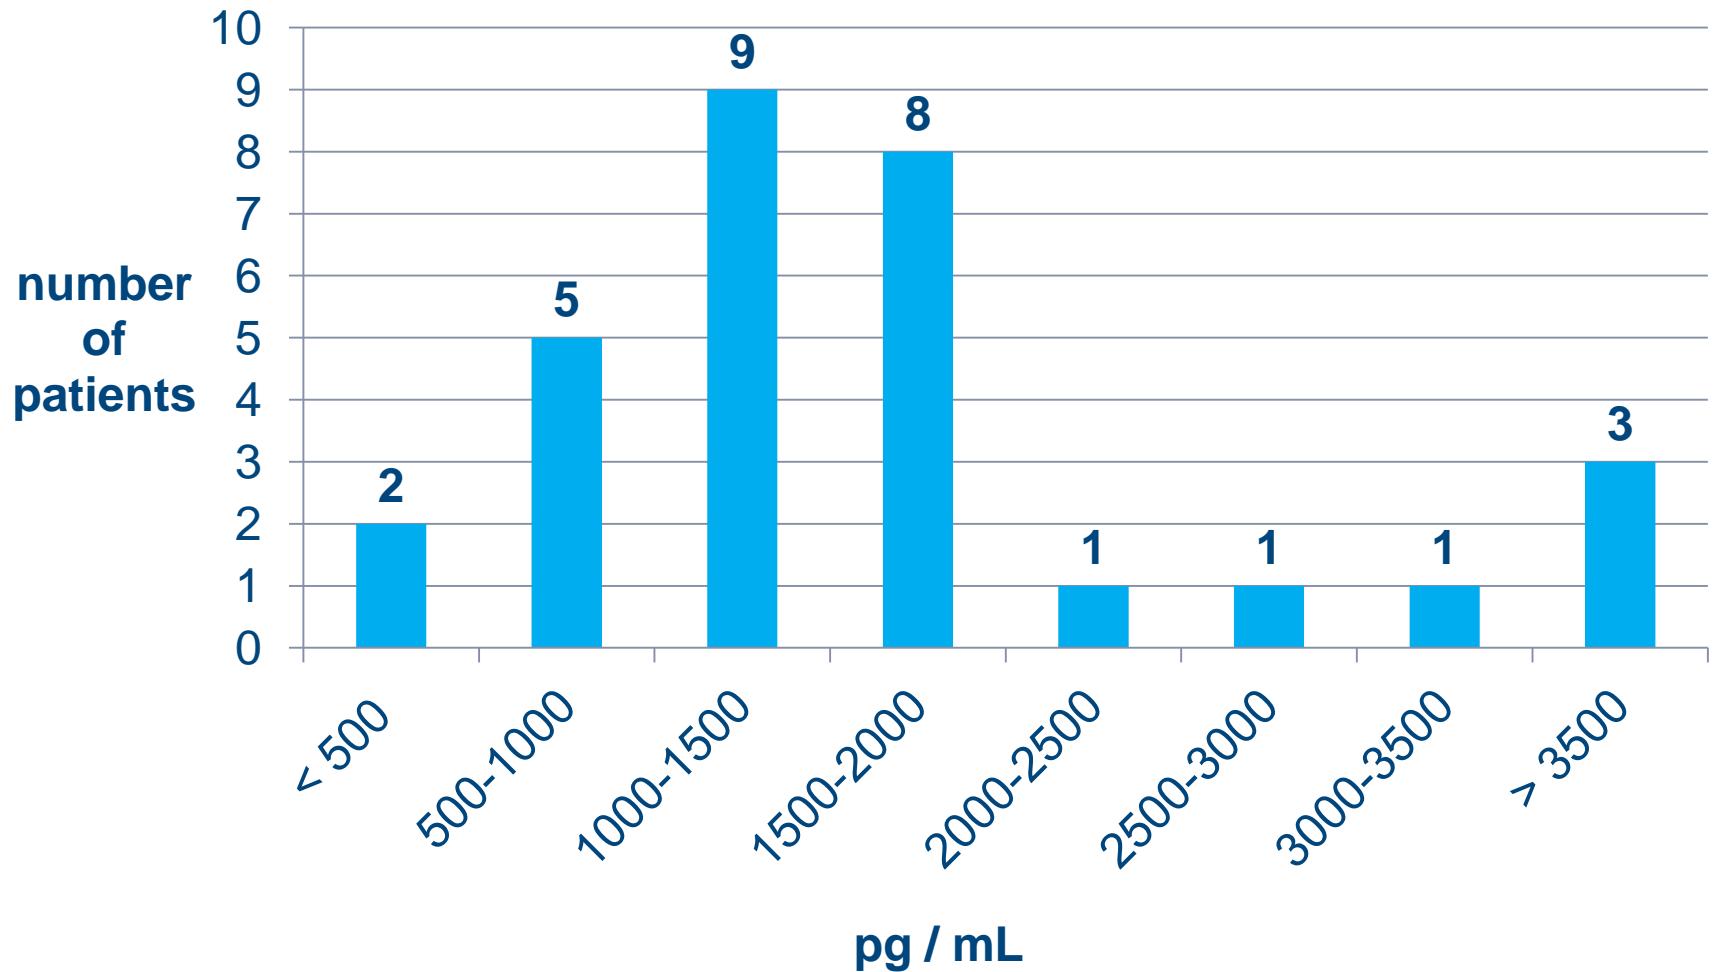

Additional dose requirement

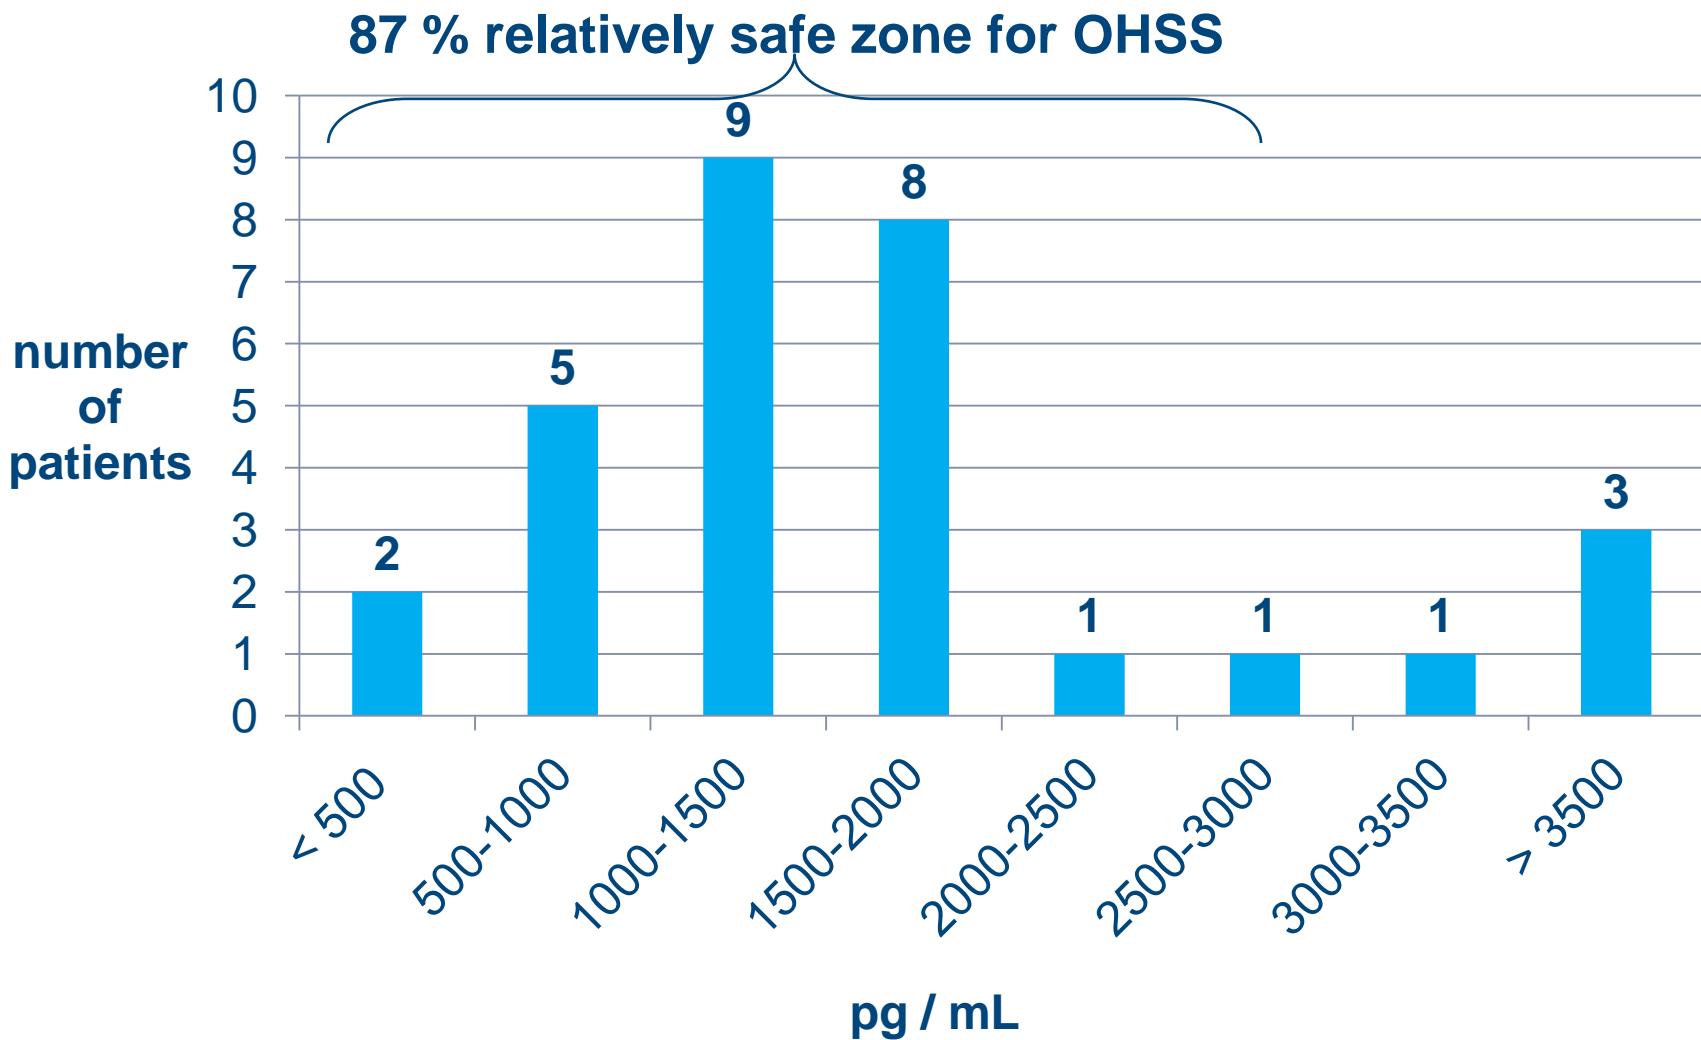

In 15 cycles that have not reached the criteria for hCG triggering within 7 days of corifollitropin alfa injection, the mean additional dose requirement per patient was:

310 IU of gonadotropin per patient

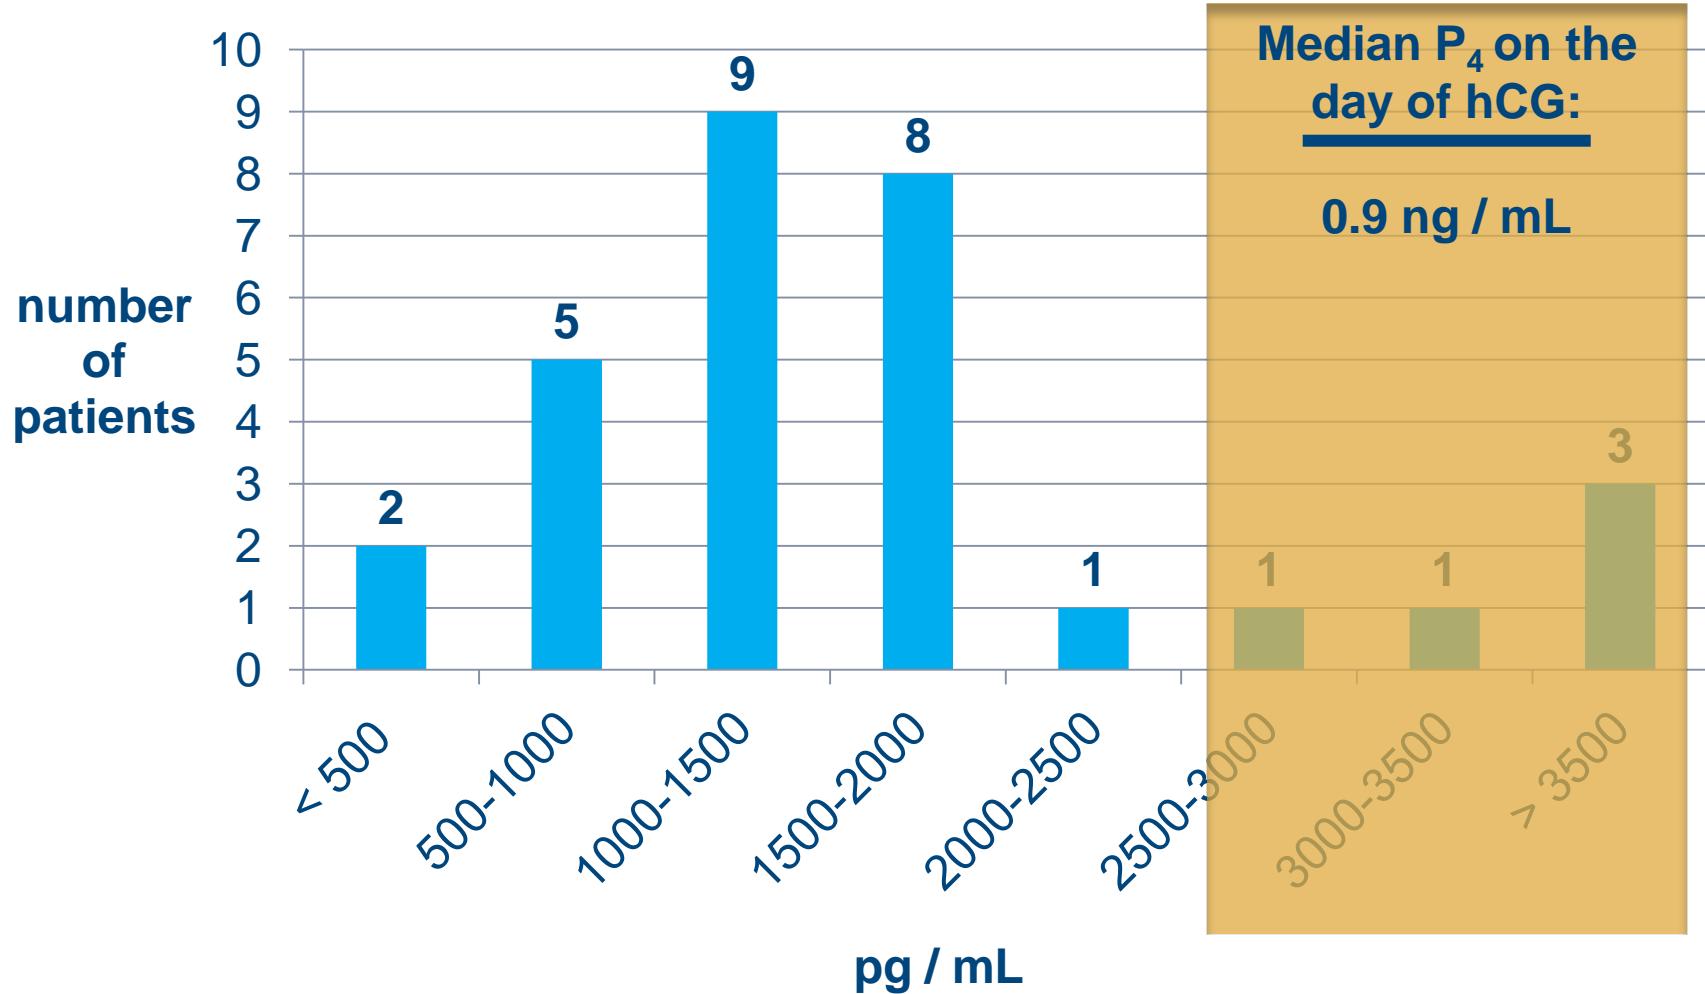

Peak serum E₂ levels on the day of hCG

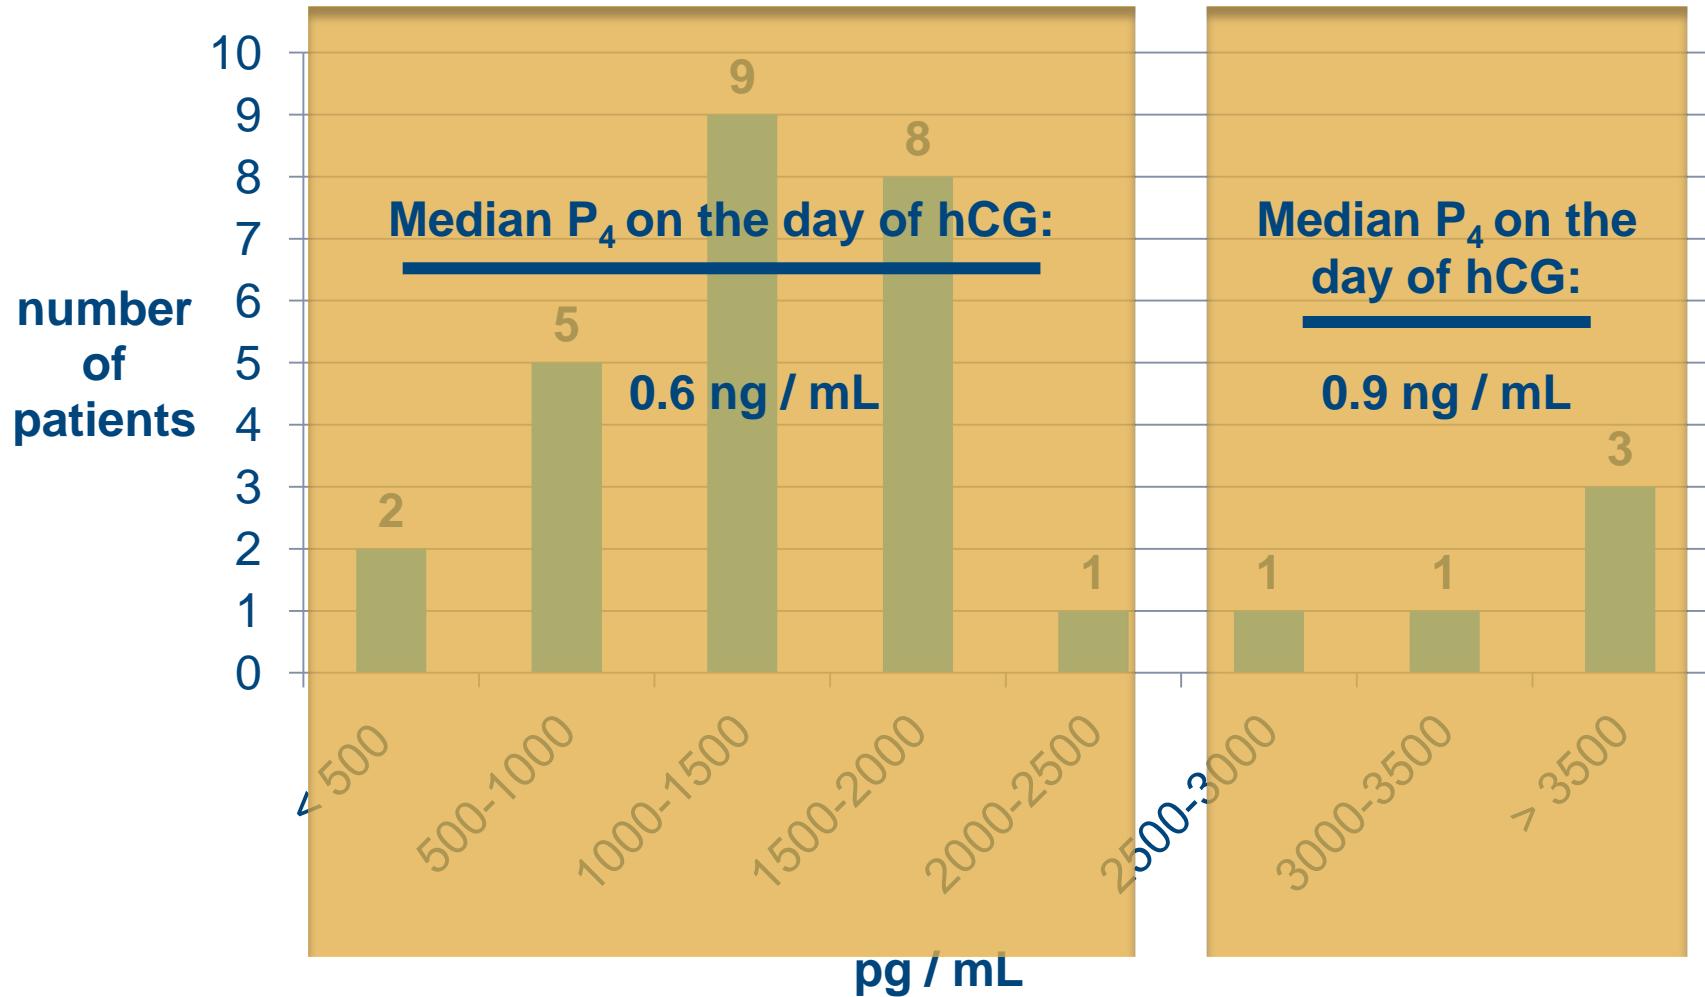

Peak serum E₂ levels on the day of hCG

Peak serum E₂ levels on the day of hCG

Peak serum E₂ levels on the day of hCG

What about P₄ elevation in follicular phase?

Serum P ₄ on the day of hCG	Number of cycles
≥ 1.5 ng / mL	0

Conclusions

- Corifollitropin alfa can be adopted easily to clinical practice without any compromise in cycle outcomes
- It has additional benefits of simplicity and patient friendliness
- Just like the introduction of antagonists into COH, this mode of ovarian stimulation will have a prominent role in the management of IVF cycles
