

# **The Role of CA 125 in the management of ovarian cancer**

**PD Dr. med. G. Oskay-Özcelik**

Praxisklinik Krebsheilkunde für Frauen-Spandau/Lichtenberg

# CA 125

- Founded in 1981 by Bast
- High molecular weight glycoprotein
- In 80% of OvCa patients and 1% of healthy people overexpressed
- Elevated in 50% only of stage I and 80% of advanced stage disease

# Role of CA 125

- **Screening**
- **Risk assessment and early diagnosis**
- **Monitoring of the disease**
- **Follow up**

# Ovarian Cancer

- Despite the effectiveness of surgery and first-line chemotherapy, 50–75% of patients with advanced disease will relapse, underlining the need for effective second-line strategies
- In clinical practice CA-125 monitoring is frequently used as a part of follow-up care for patients with ovarian cancer
- The role of CA 125 in follow-up care remains controversial in regards to the optimal frequency of CA-125 measurements and the impact of an elevated CA-125 level in the absence of symptoms

# Recommendation Follow up Ovarian cancer

	1-3 Year	4+5 Year	>5 Year
Anamnesis/ Gynecologic examination	every 3 months	every 6 months	once per year
Vaginal Ultrasound / abd. Ultrasound	every 3 months	every 6 months	once per year
Mammography	· once per year	· once per year	· once per year
<b>Bloodtest (Ca125)/ additional radiological examinations</b>	<b>Only if</b>	<b>symptoms</b>	<b>occur!!!</b>

CA 15-3

CA 125

HCG  
CEA

## Defining the problem...?

- Can CA 125 monitoring detect recurrence earlier?
- Can an earlier treatment of relapse **may** delay symptomatic disease (ascites, intestinal obstruction, pain etc.)
- Can a earlier treatment of relapse **may** increase:
  - the effect of therapy?
  - *prolong survival (?)*

ScC  
AFP

CA 72-4

CA 19-9

# Basis of GCIIG CA-125 relapse criteria

Analysis after 81 relapses from 255 patients in North Thames Ovary Trial “5 versus 8”

If CA125 rise confirmed

Sensitivity (of eligible patients) 84%

False positive rate 1.4%

Median lead time to clinical progression: 63 days

***Conclusion: A confirmed rise of serum CA 125 level to more than twice the upper limit of normal during follow up after first line chemotherapy accurately predicts tumour relapse!!!!***

**Early treatment of relapsed ovarian cancer based on CA125 level  
alone  
versus  
delayed treatment based on conventional clinical indicators**

**Results of the randomized  
MRC OV05 and EORTC 55955 trials**

**Gordon Rustin (Mount Vernon Cancer Centre)  
and Maria van der Burg**

On behalf of all OV05 and 55955 Collaborators

31<sup>st</sup> May 2009

# Trial Profile

**Registered patients  
N=1442**

**REGISTER**  
**Blinded CA125 measured  
every 3 months**

**Non randomised patients**

**N (%)**  
**421 (29)** CA125<2ULN and no relapse at trial closure  
**61 (4)** Relapsed at same time as CA125>2ULN  
**213 (15)** Relapsed without CA125>2ULN  
**56 (4)** Died  
**133 (9)** Patient withdrawal  
**29 (2)** Other/unknown reasons

**Randomised  
N=529 (37%)**

**CA125>2 x upper limit of normal  
RANDOMISED**

**Early treatment**

N=265  
N=254 (96%) started second-line chemotherapy

**Delayed treatment**

N=264  
N=233 (88%) started second-line chemotherapy

# Baseline characteristics:

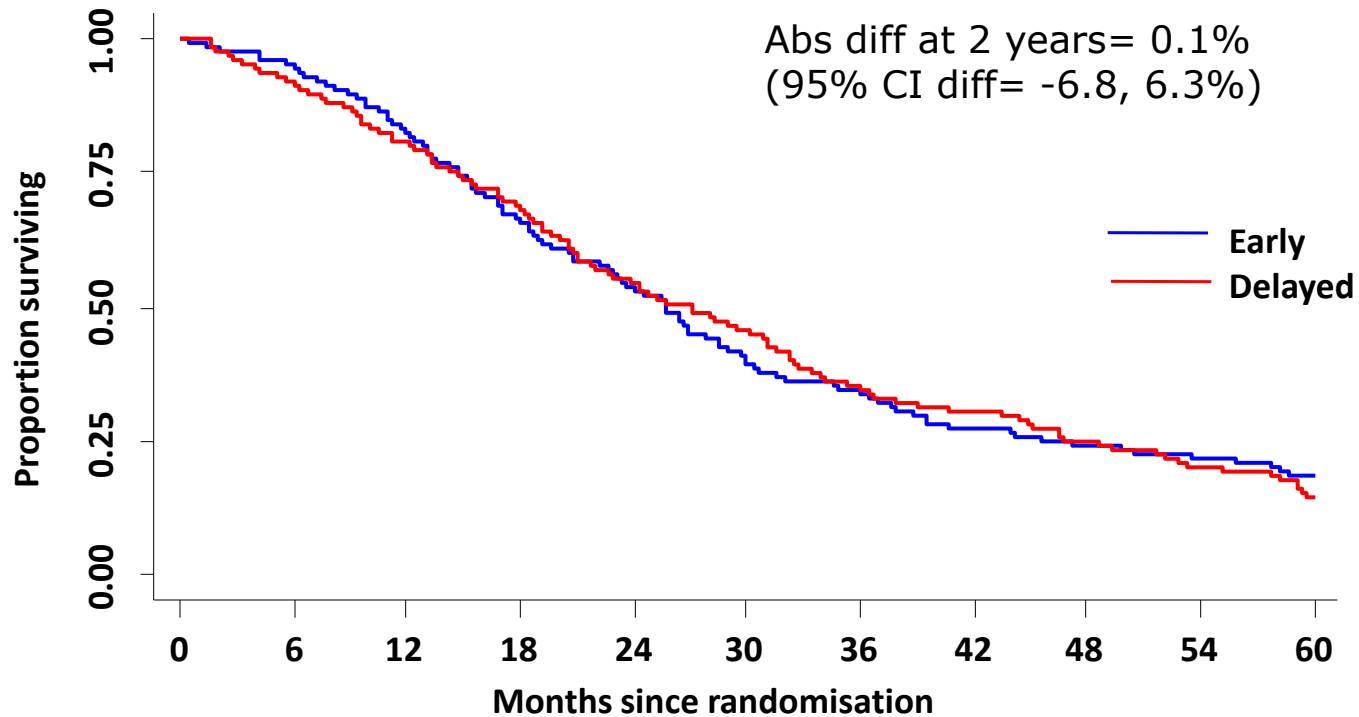

## All randomised patients (N=529)

		<b>Early</b>	<b>Delayed</b>
<b>Age</b>	<b>Median (range)</b>	60 (35-86)	61 (37-93)
<b>FIGO stage</b>	<b>I</b>	9%	8%
	<b>II</b>	11%	10%
	<b>III</b>	68%	69%
	<b>IV</b>	12%	13%
<b>WHO PS</b>	<b>0</b>	69%	75%
	<b>1</b>	29%	25%
	<b>2 &amp; 3</b>	2%	<1%
<b>Histology</b>	<b>Serous</b>	66%	59%
	<b>Endometrioid</b>	12%	12%
	<b>Mucinous</b>	3%	3%
	<b>Clear cell</b>	4%	4%
	<b>Undifferentiated</b>	8%	6%
	<b>Adenocarcinoma not otherwise specified</b>	6%	15%
	<b>Other</b>	1%	1%

# Overall Survival

**HR=1.00 (95%CI 0.82-1.22) p=0.98**

Number at risk

Early	265	247	211	165	131	94	72	51	38	31	22
Delayed	264	236	203	167	129	103	69	53	38	31	19

# Conclusions

- This early treatment did not improve overall survival
  - HR=1.00, 95% CI 0.82 – 1.22, p=0.98
  - Absolute difference at 2 years 0.1% (95%CI – 6.8, 6.3%)
- Early chemotherapy does not improve QoL

# MRC OV05 and EORTC 55955 trials

## Points to discuss!!!

- **Long time period of study recruitment**
- **High drop out rate** (1442 patients registered > 529 only randomised (37%))
- **Different treatments after recurrence**  
(only one-third received a combination of carboplatin and paclitaxel)
- **Which examination tool** (gynec. exa., new imaging technology) were used to reduce the proportion of patients with Ca 125 increase alone
- **Not homogenous population** (platinum sensitive and resistant patients)
- **No data regarding secondary cytoreduction**

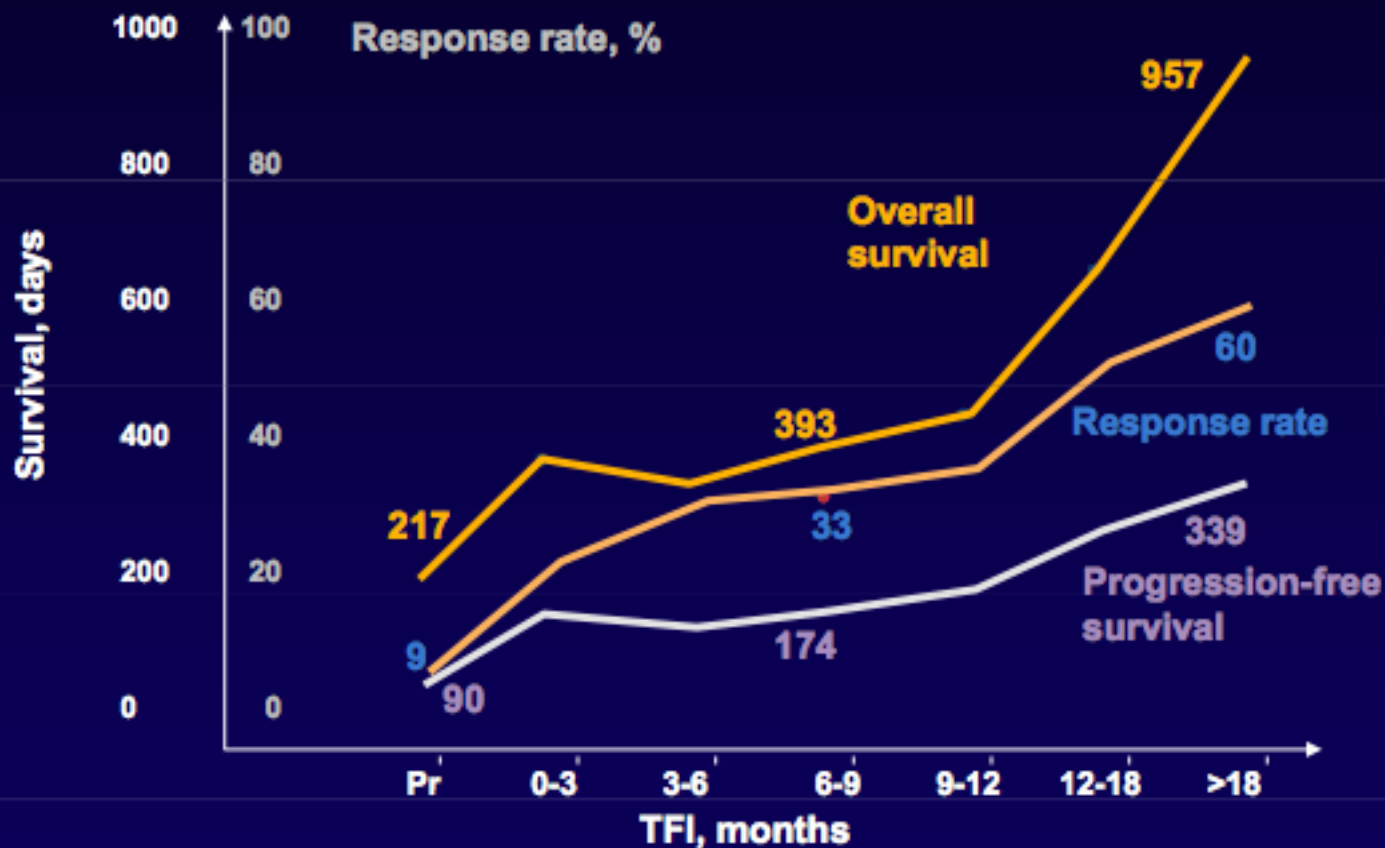

# Patients outcome in relapse depends on:

Treatment free intervall

Treatment at Recurrence:

- Chemotherapy
- Surgery

# Outcome by Treatment-Free Interval (TFI)

# The Treatment Paradigm Second Line

**Platinum  
Refractory/Resistant**

**<6 months**

**Non-Platinum  
Monotherapy**

**Platinum  
sensitive**

**>6 months**

**Discuss surgery**

**Platinum-Based  
Combination**

# Trials of Combination vs Monotherapy in Platinum-Sensitive AOC

Author/ Group	Year	No. Pts	Regimens Evaluated	PFS	OS
<b>Bolis<sup>1</sup></b>	<b>2001</b>	<b>190</b>	<b>Carboplatin + Epirubicin vs Carboplatin</b>	<b>NS</b>	<b>NS</b>

<b>Total</b>	<b>265</b>	<b>264</b>

# **Role of Surgery**

## **Recurrent ovarian cancer**

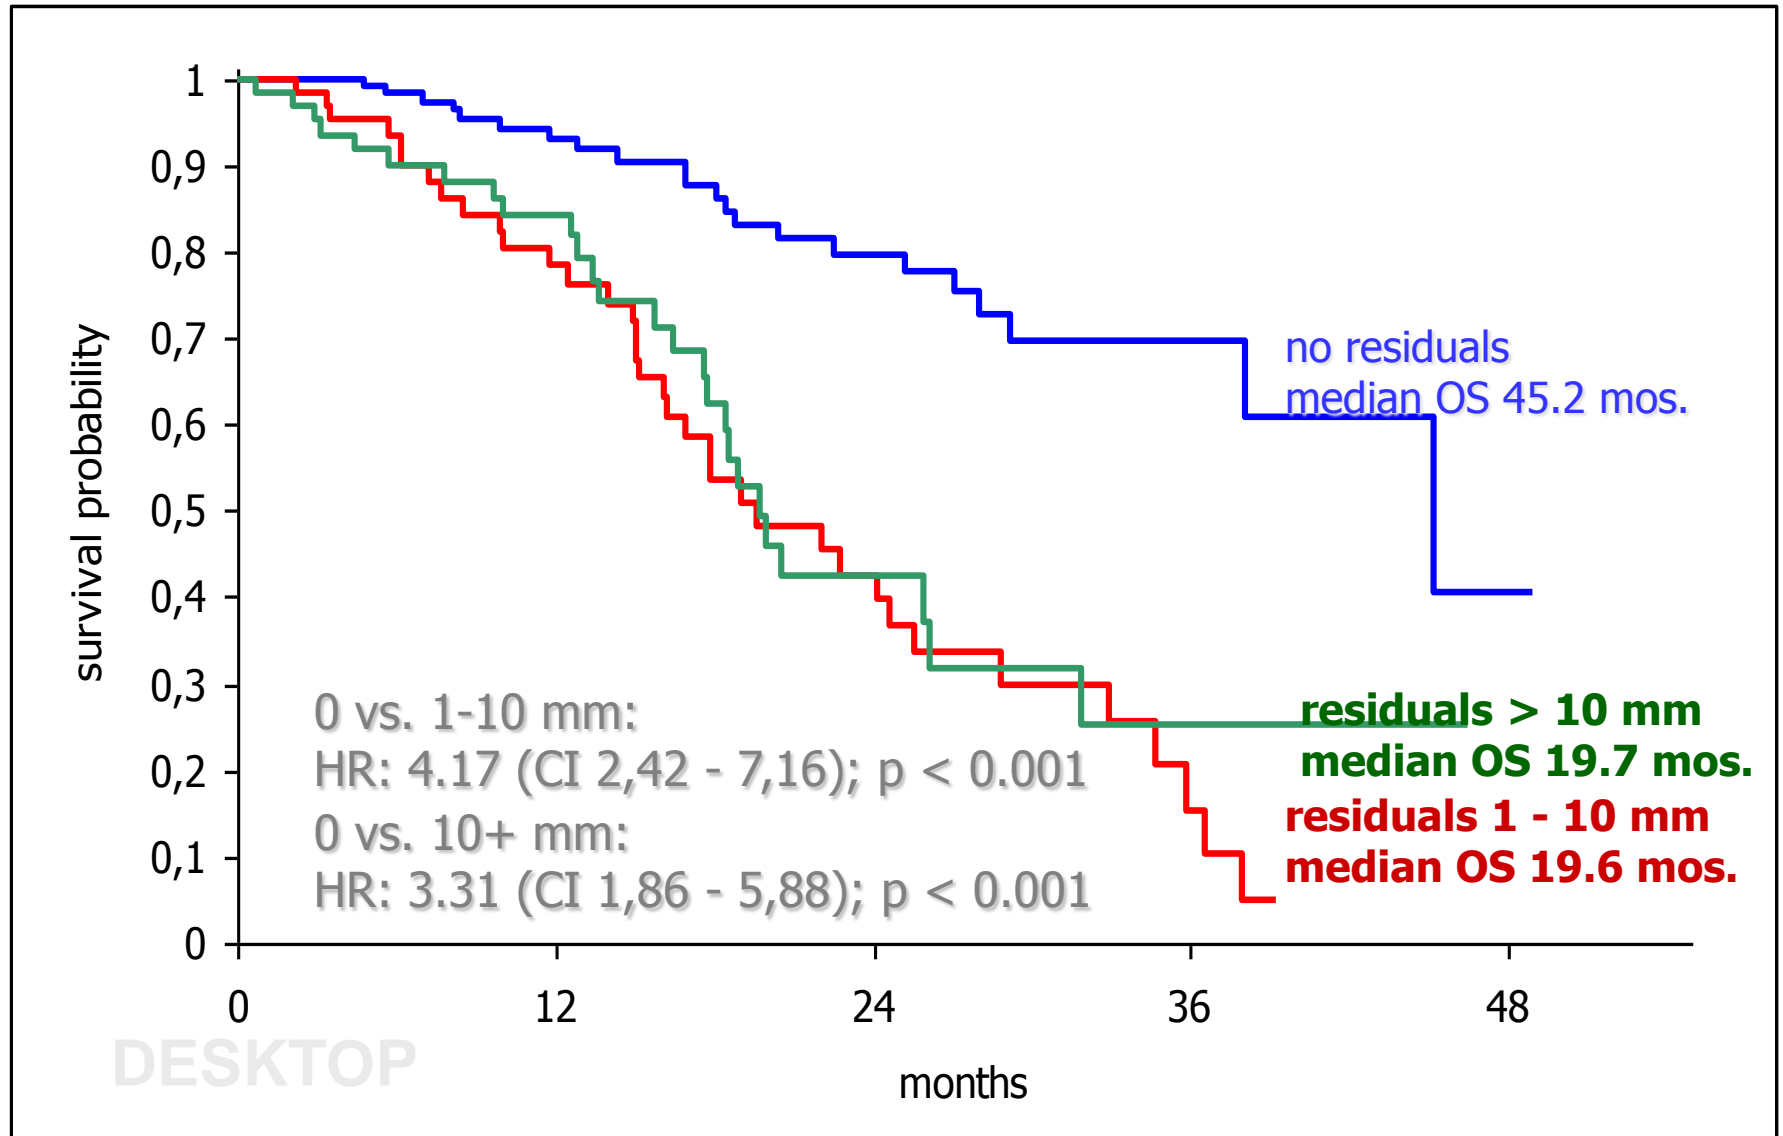

Due early detection....

more patients can may be selected for surgery.

more patients can may be operated macroscopic  
tumorfree

> may prolong Overall survival!!!!!!

# DESKTOP- OVAR I

# DESKTOP-OVAR I

## Prediktiv factors for complete resection

### Multivariate analysis

pre-OP variable	OR	(95%CI)	p
General condition (ECOG 0 vs. > 0)	2.65	(1.56-4.52)	< 0.001
Tumor residual at primary-OP ( 0 vs. > 0)	2.46	(1.45-4.20)	< 0.001
<u>or:</u> initial FIGO-stage (I/II vs. III/IV)	1.87	(1.04-3.37)	0.036
Ascites (cut-off 500 ml)*	5.08	(1.97-13.16)	< 0.001

\* exclusiv CA 125 (Correlation with ascites)

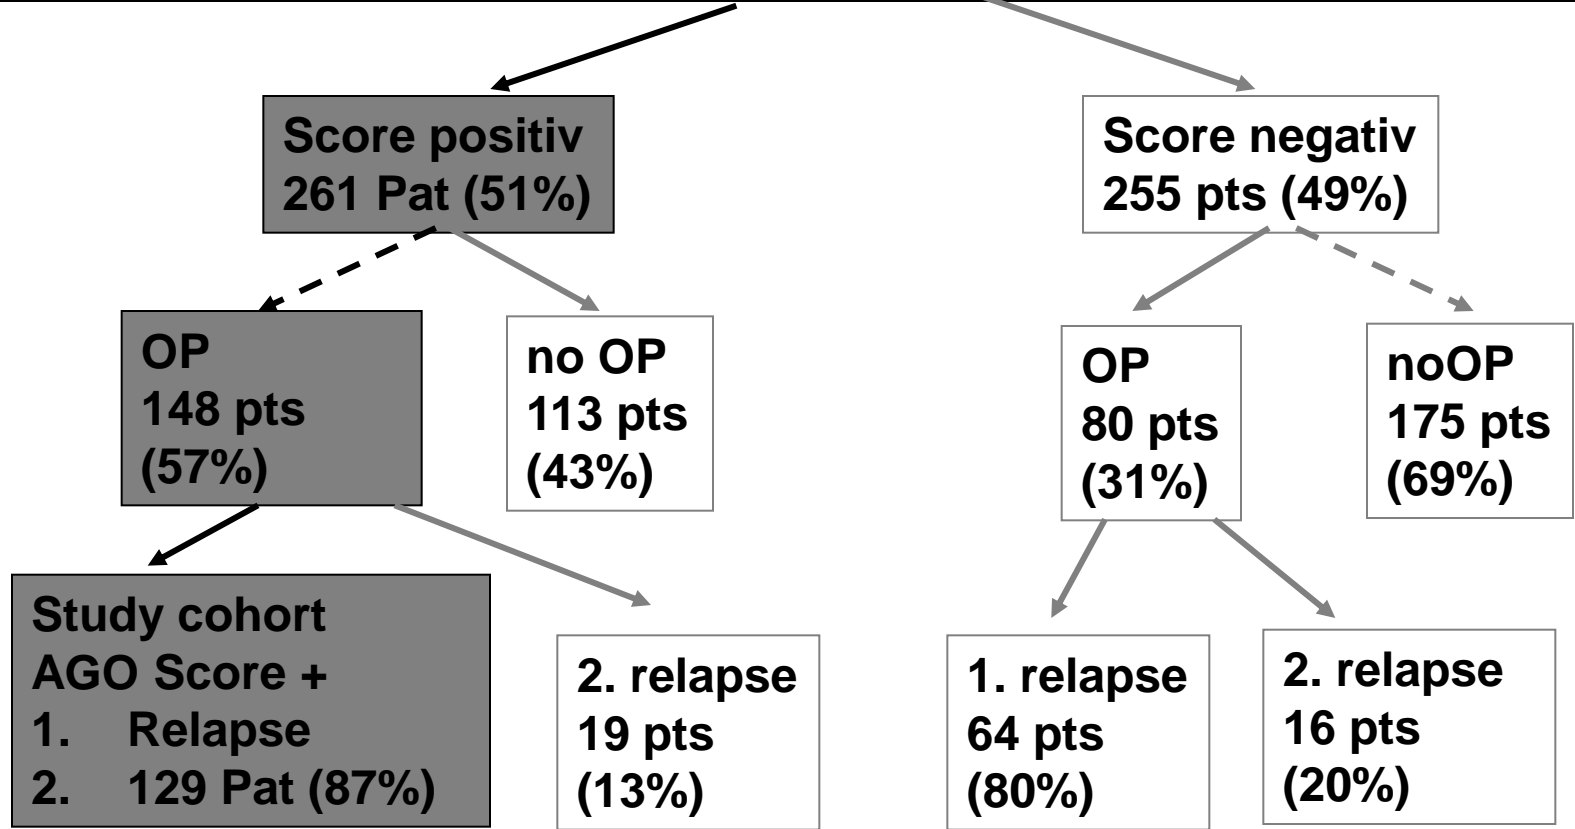

Not significant for complete resection:

- Localisation of relapse (pelvis vs. andere)
- treatment free interval

# AGO-OVAR OP-2 (DESKTOP II)

## Preoperative Selection

08/06 – 03/08: Screening of 516 pts with platinum sensitive recurrence (46 centers)

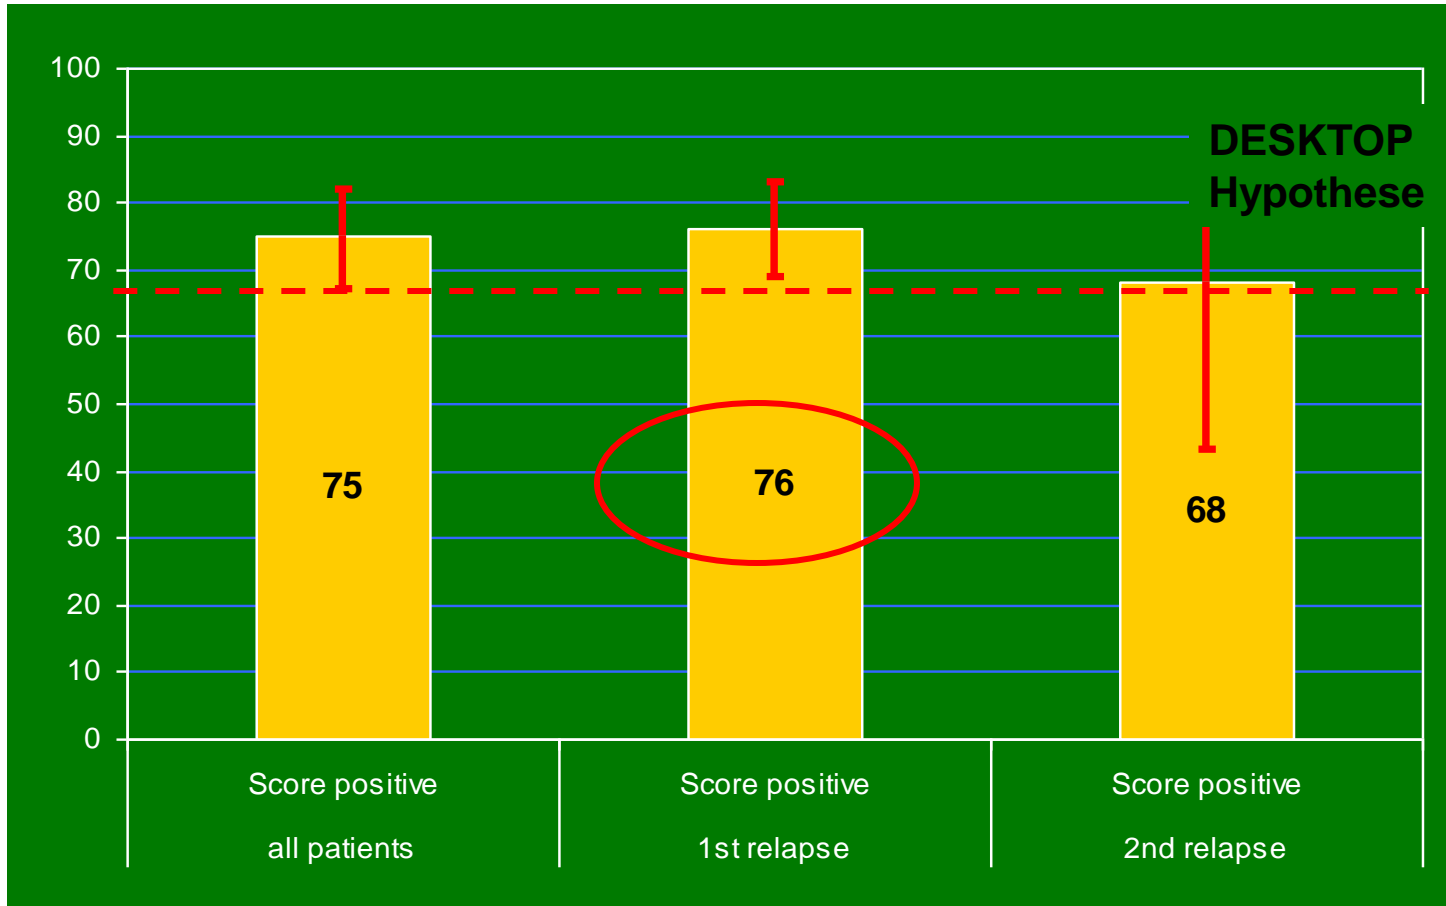

**Preoperative Selektion:**

**228 Pat (44.2%) with relapse-OP**

# AGO-OVAR OP-2 (DESKTOP II)

## Rate of complete resection using the the AGO-Score

**Complete resection in 76%**

# AGO-OVAR DESKTOP III (Protocol AGO - OVAR OP.4)

A randomized trial evaluating cytoreductive surgery in patients with platinum-sensitive recurrent ovarian cancer

**Platinum-sensitive recurrent cancer of the ovaries, fallopian tubes, or peritoneum**

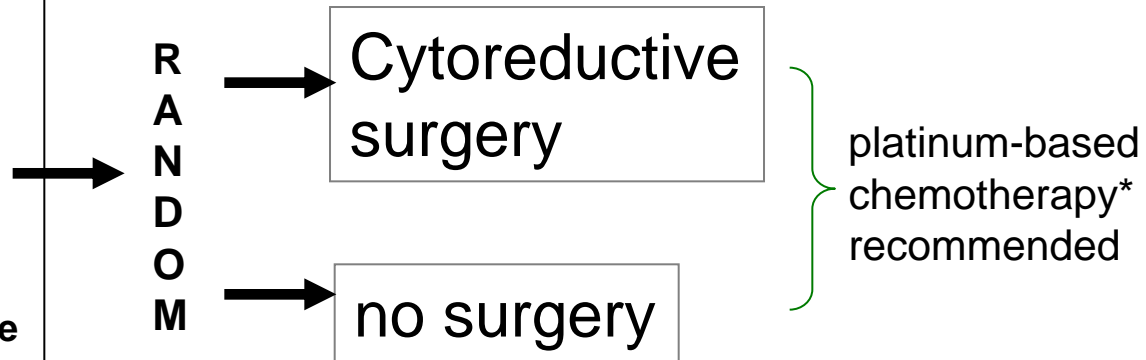

**PFI > 6 mos since last chemotherapy which was platinum-based**

**No prior chemotherapy for this 1st relapse**

**Complete resection seems feasible and positive AGO score:**

- PS ECOG 0
- no ascites > 500 ml
- prior complete debulking or initial FIGO I/II

**Post-OP Standard chemotherapy planned**

- \* Recommended platinum-based chemotherapy regimens:
- carboplatin/paclitaxel
  - carboplatin/gemcitabine
  - carboplatin/pegliposomal doxorubicin

***What do our patients think and expect?***

**...UND JETZT?**

**NACHSORGE**  
**NACH BEHANDLUNG VON EIERSTOCKKREBS WIR BRÄUEN IHN MIT**

Sehr geehrte Patientinnen bzw. ehemalige Patientinnen,

wir möchten Sie bitten, sich an einem Projekt zur Verbesserung der Versorgungssituation beim Ovarialkarzinom (Eierstockkrebs) zu beteiligen.  
 Ziel dieses Fragebogens ist es, Informationen über die konkreten Bedürfnisse und Erwartungen an die Versorgung im Rahmen der Betreuung von Patientinnen mit Eierstockkrebs direkt von Betroffenen zu sammeln.  
 Diese sollten ausgewertet werden und den Ärzten helfen, bessere Versorgungsstrukturen zu entwickeln - und vor allem Ihre Bedürfnisse besser zu berücksichtigen.

Dieses Konzept wird erstmals in Deutschland durchgeführt und wurde von den Arbeitsgruppen der Nord-Ostdeutschen Gesellschaft für Gynäkologische Onkologie und der Studiengruppe OVAR der Arbeitsgemeinschaft Gynäkologische Onkologie konzipiert.

Für die Teilnahme an dieser Umfrage benötigen wir keine Angaben wie Name, Adresse oder Geburtsdatum. Den Fragebogen erhalten Sie von Ihrer behandelnden Klinik - Ihre Daten werden nicht an die Projektleitung weitergegeben. Wir bitten Sie deshalb auch, den Fragebogen ausgefüllt und anonym in beigefügtem frankiertem Briefumschlag uns zurück zu senden.

Den Fragebogen erhalten Sie von Ihrer Klinik oder bei:  
 Charité-Universitätsmedizin Berlin  
 Studienzentrum Eierstockkrebs,  
 Leitzentrale der AG Ovarialkarzinom der NOGGO e.v.  
 Campus Virchow-Klinikum, Frauenklinik,  
 Augustenburger Platz 1 in 13353 Berlin  
 Telefon: 030 - 450564052  
 Projektkoordination: PD.DR. Jalid Sehouli, Dr.G.Oskay-Özcelik

ein Kooperationsprojekt der NOGGO und Studiengruppe OVAR der AGO  
 Projektmanagement: Dr. G. Oskay-Özcelik, Dr. J. Sehouli, Dr. A. du Bois et al.

***What do patients think about CA-125 monitoring in the follow-up?  
 Results from a multicenter trial in 1060 patients with ovarian cancer.***

**ASCO 2009, selected Poster  
 Guelten Oskay-Oezcelik, ,Jalid Sehouli, Andreas du Bois et al.**

# Patient Characteristics

No. of pts.	1060	
Routine measurements of CA 125 in follow-up	699 (66%)	
Analyzed questionnaires (without current treatment)	589 (56%)	
Time period of survey	02-12. 2007	
Median age, years (range)	58 (49-65)	
Primary ovarian cancer	437 (74%)	
Relapsed ovarian cancer	139 (24%)	
Unknown		22 (2%)

(Geico)

***Should we continuing to use CA 125  
during FU ?***

***YES, because.....***

- Reassurance while levels remain normal
- Simple and cost-effective
- CA 125 increase can select the patients that need other 2nd level examinations (PET, CT, .....
- To start treatment earlier before symptoms occur > treatment will be better tolerated > more effective (↓ dose reduction, treatment delay)
- To select patients who can benefit from surgery
- To select patients for the right and effective therapy (sensitive; resistant)
- Patients learn during the first line the value of Ca125 (.. and would ask why not during FU) > Respect patients wish and expectations

**→ effective treatment maybe prolong survival?????**
