Division of Gynecologic Oncology

Globocan 2012 World

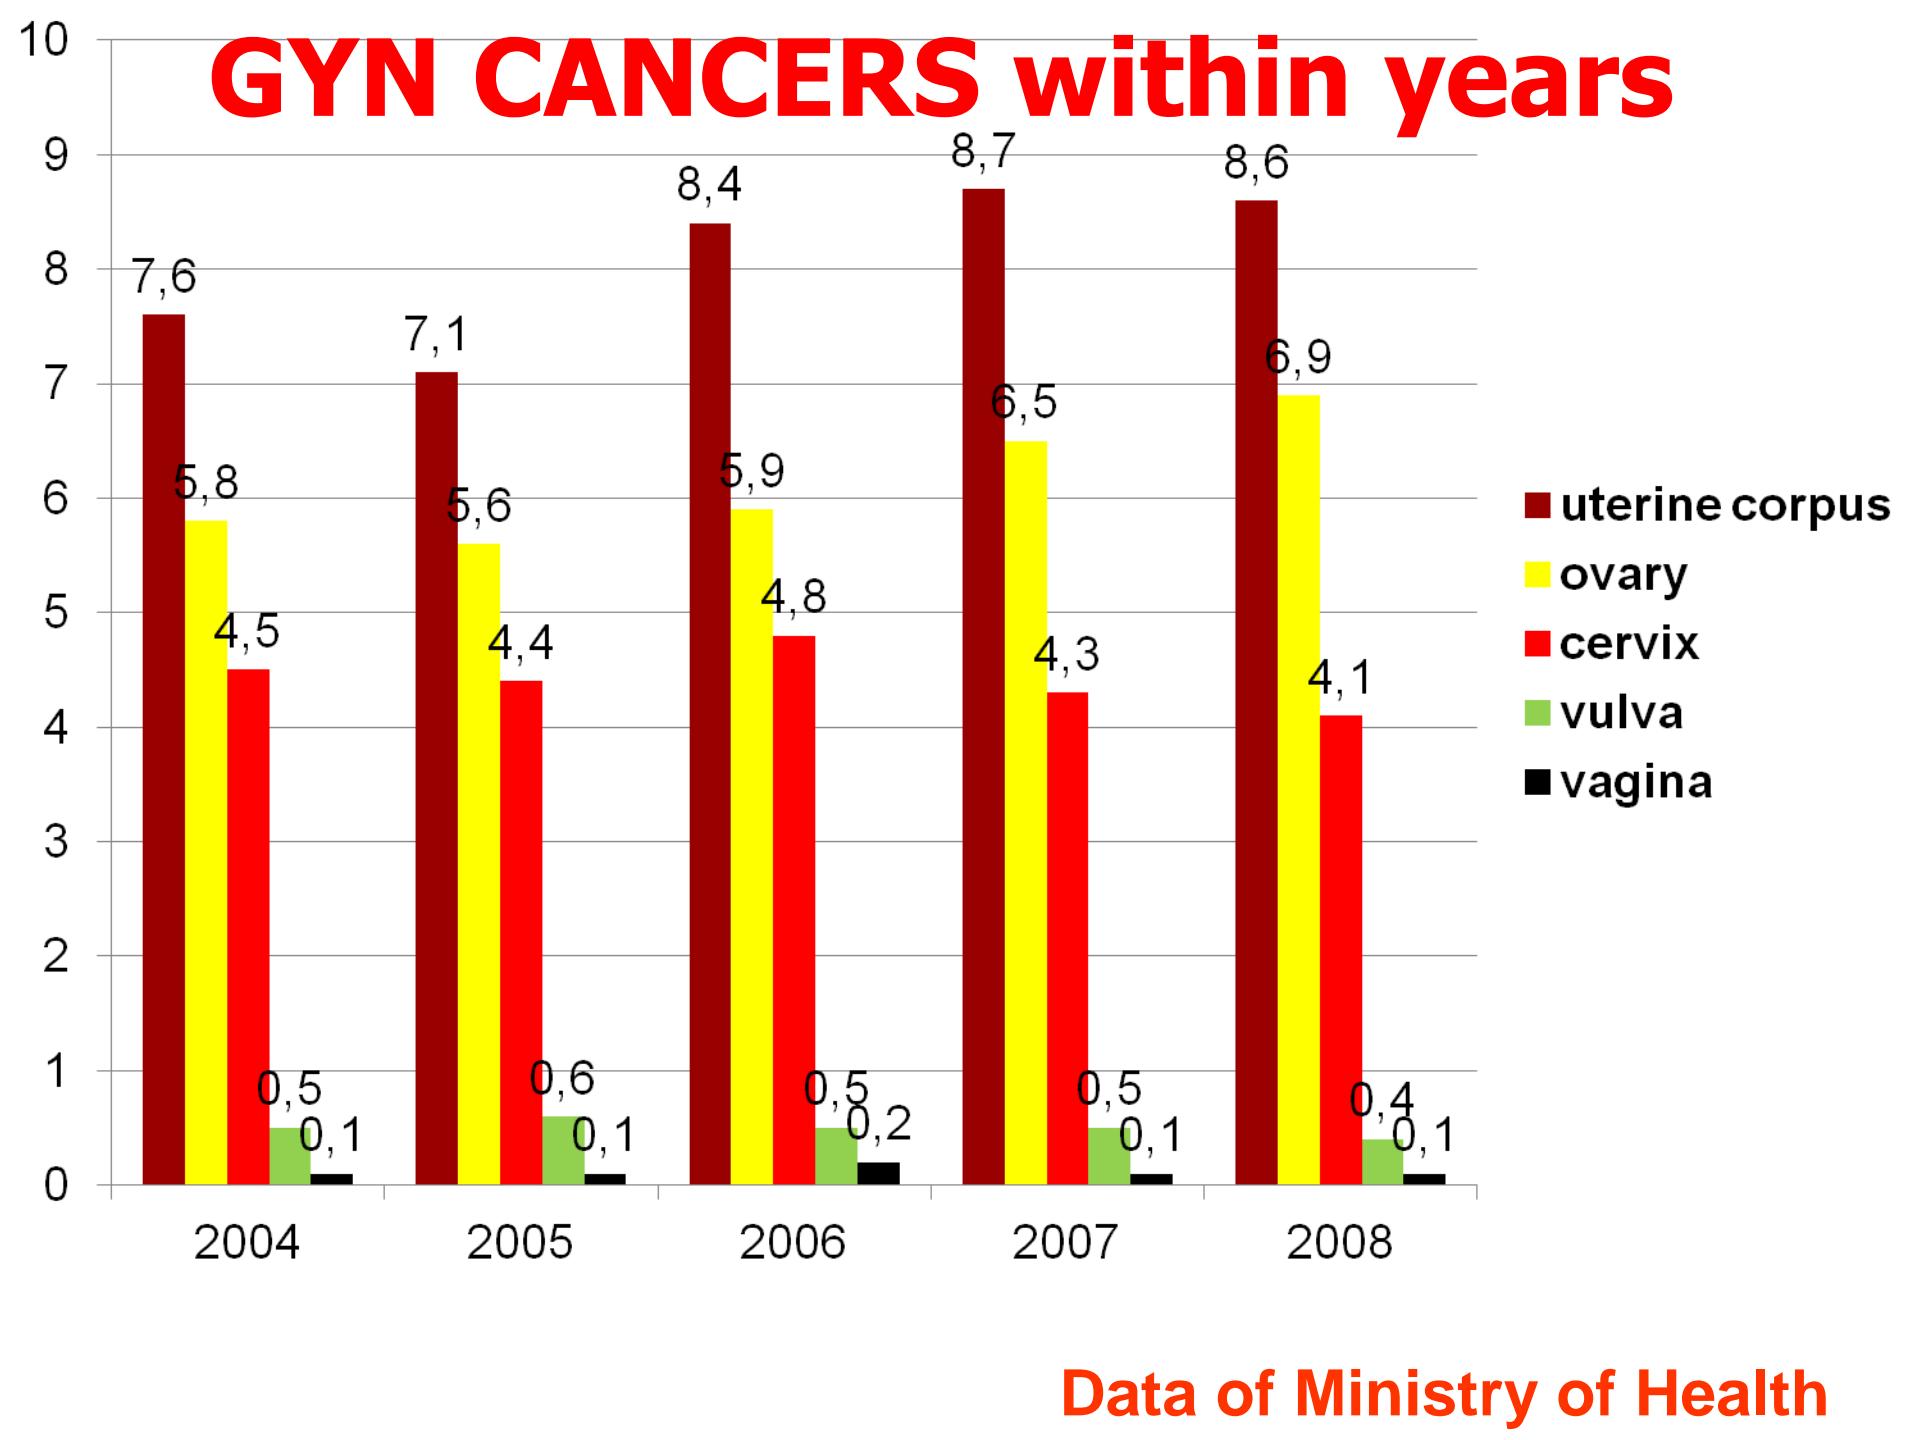

Globocan 2012 Turkey

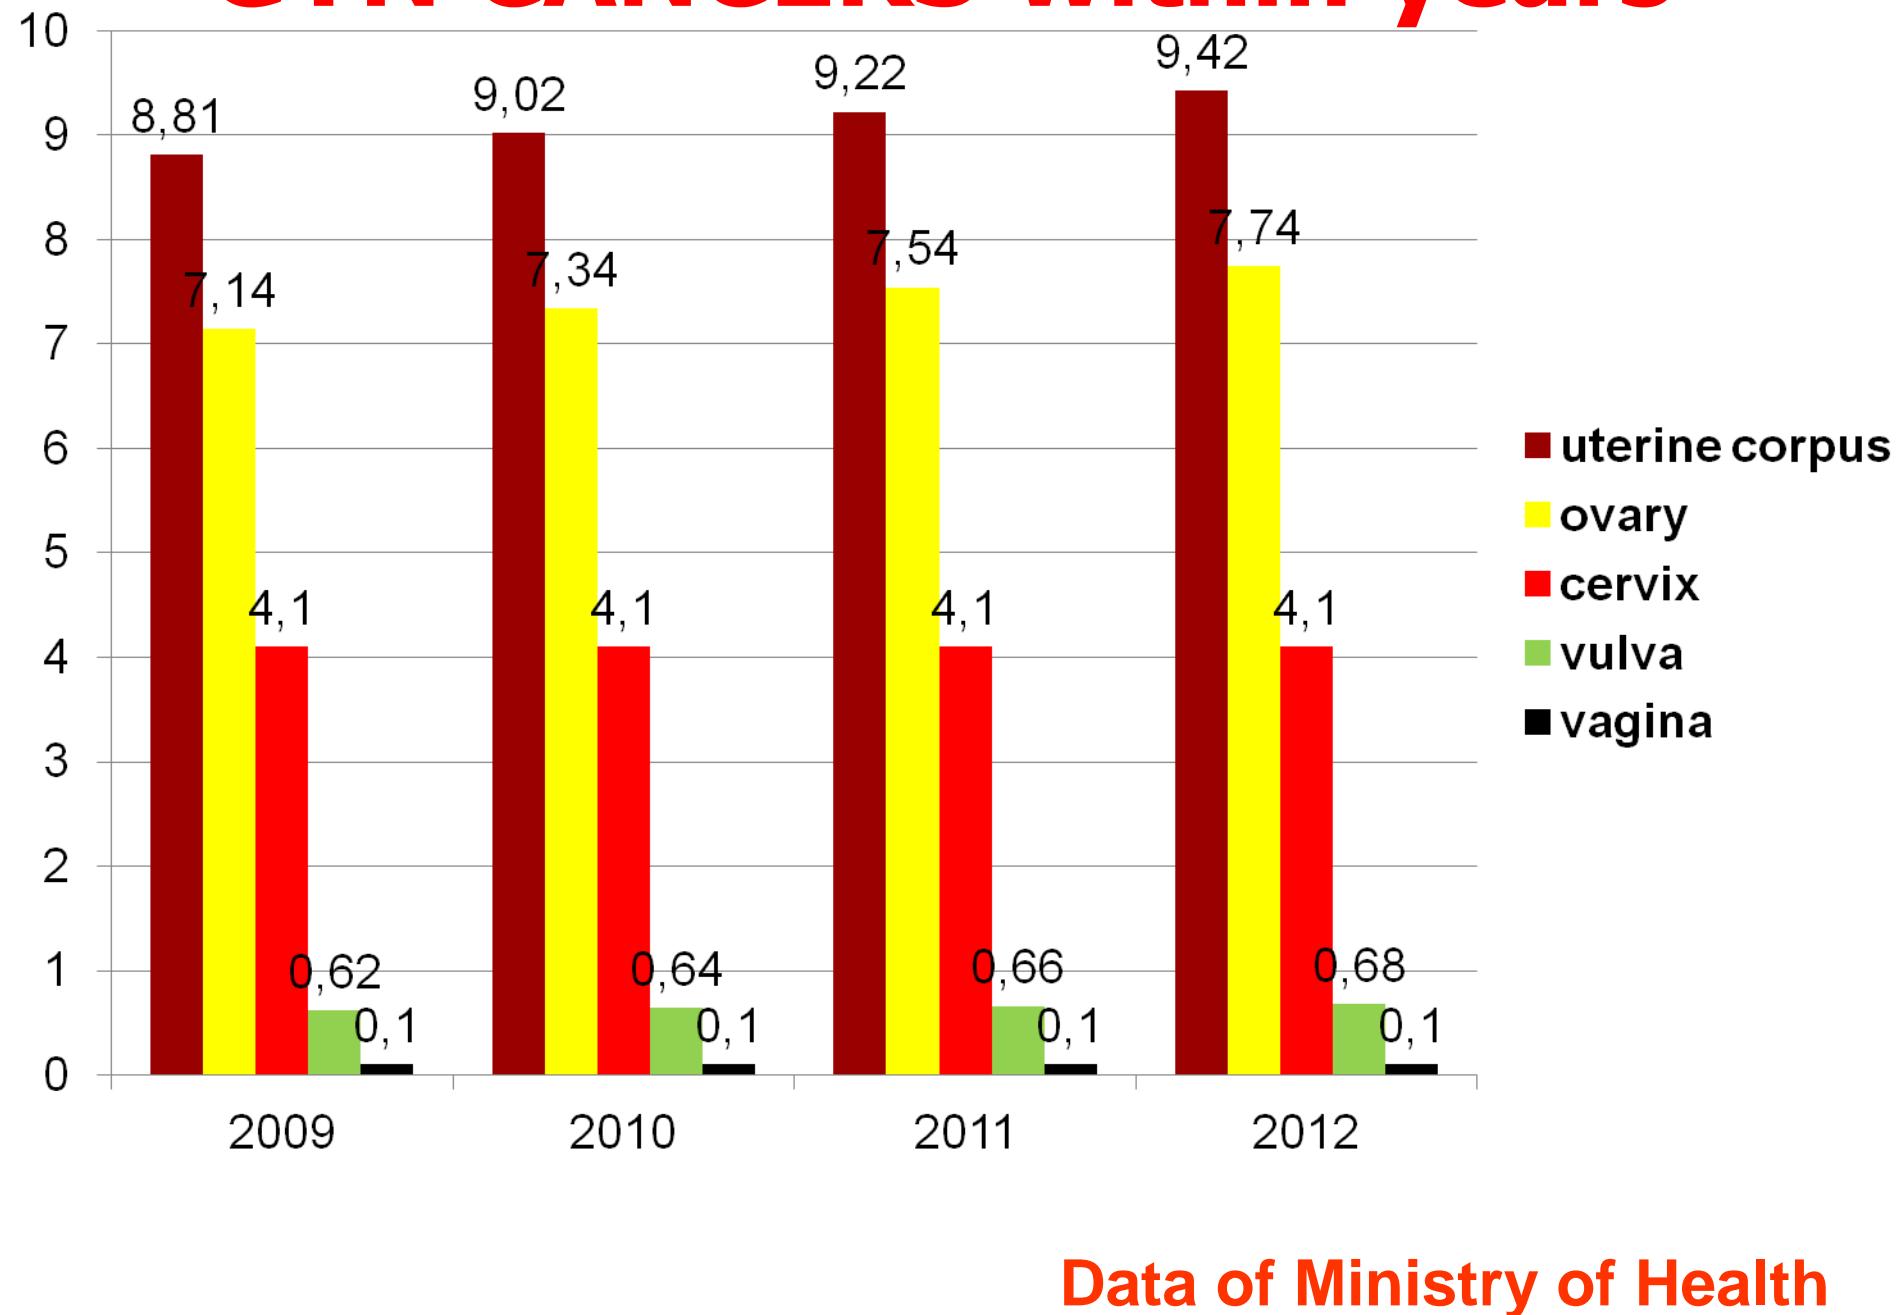

Globocan 2012

Cervical Cancer	Incidence (N/100.000)	Death (N/100.000)
Worldwide	527.624 (7)	265.653 (7,5)
Developed countries	83.078 (2,9)	35.495 (2,7)
Developing countries	444.546 (11,6)	230,158 (10,2)
Turkey	1686 (2,7)	663 (2)

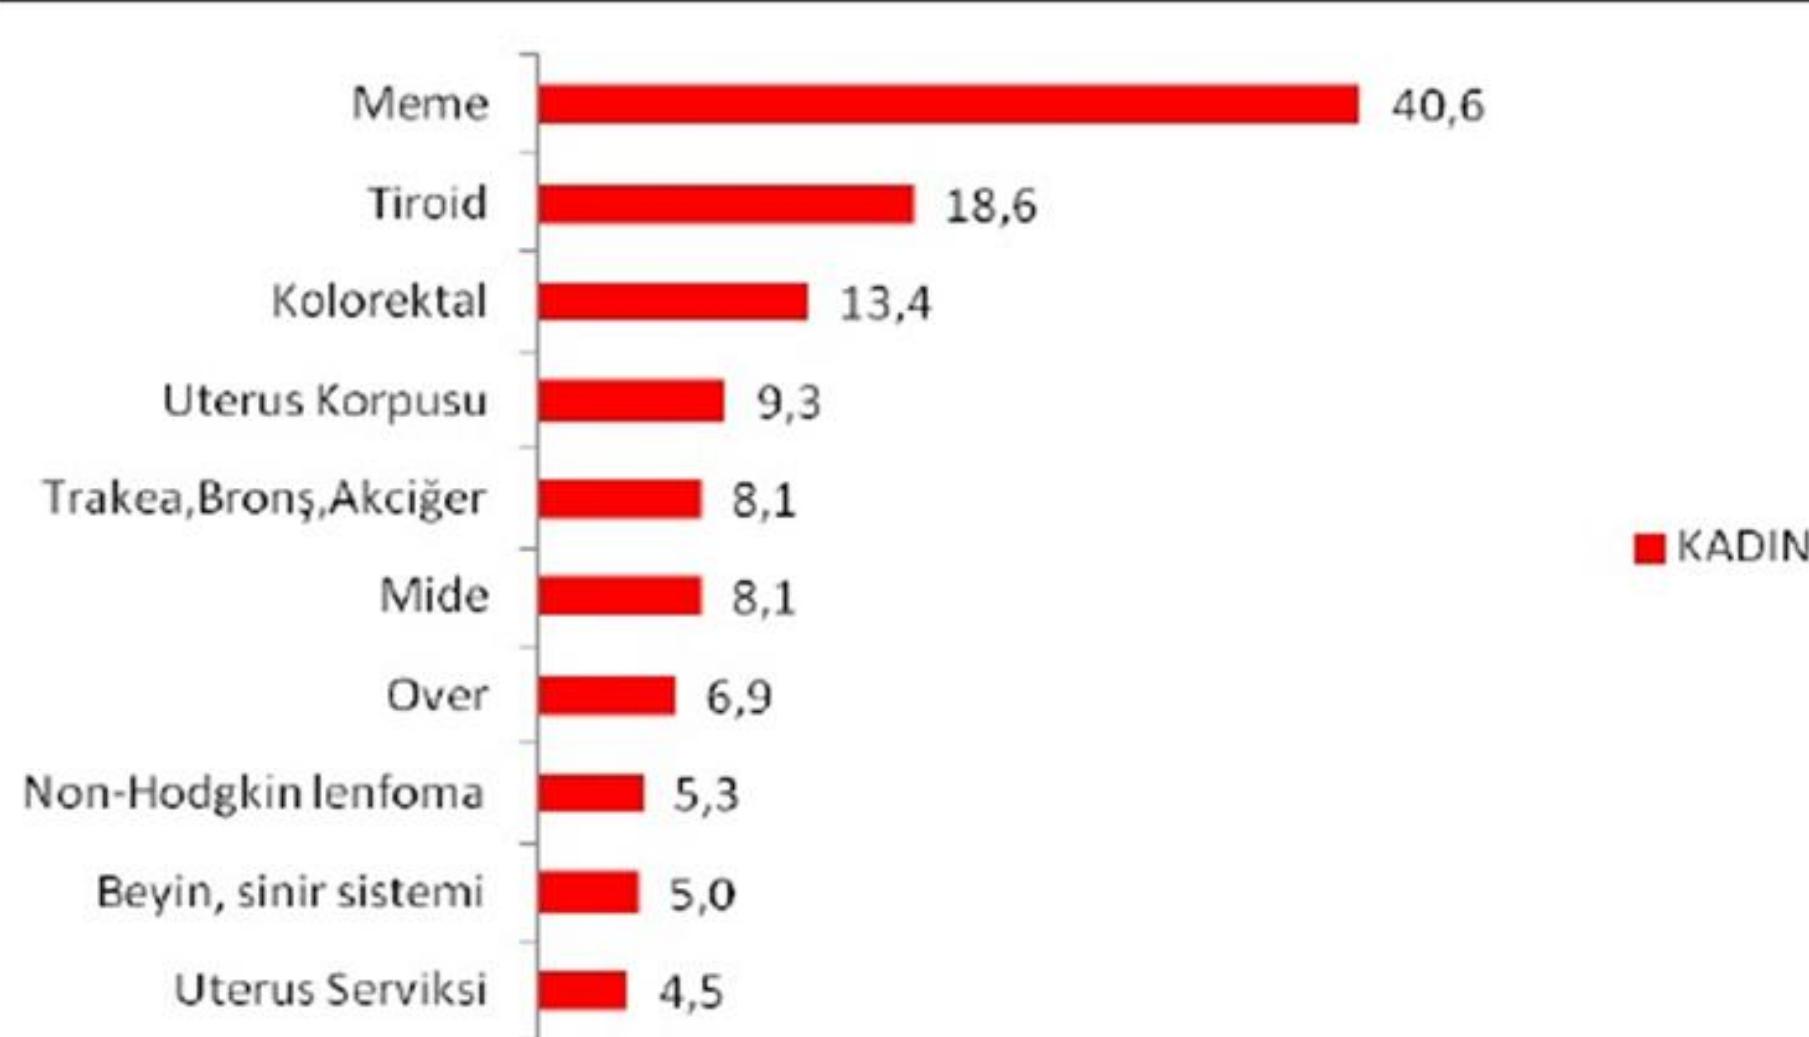

GYN CANCERS within years

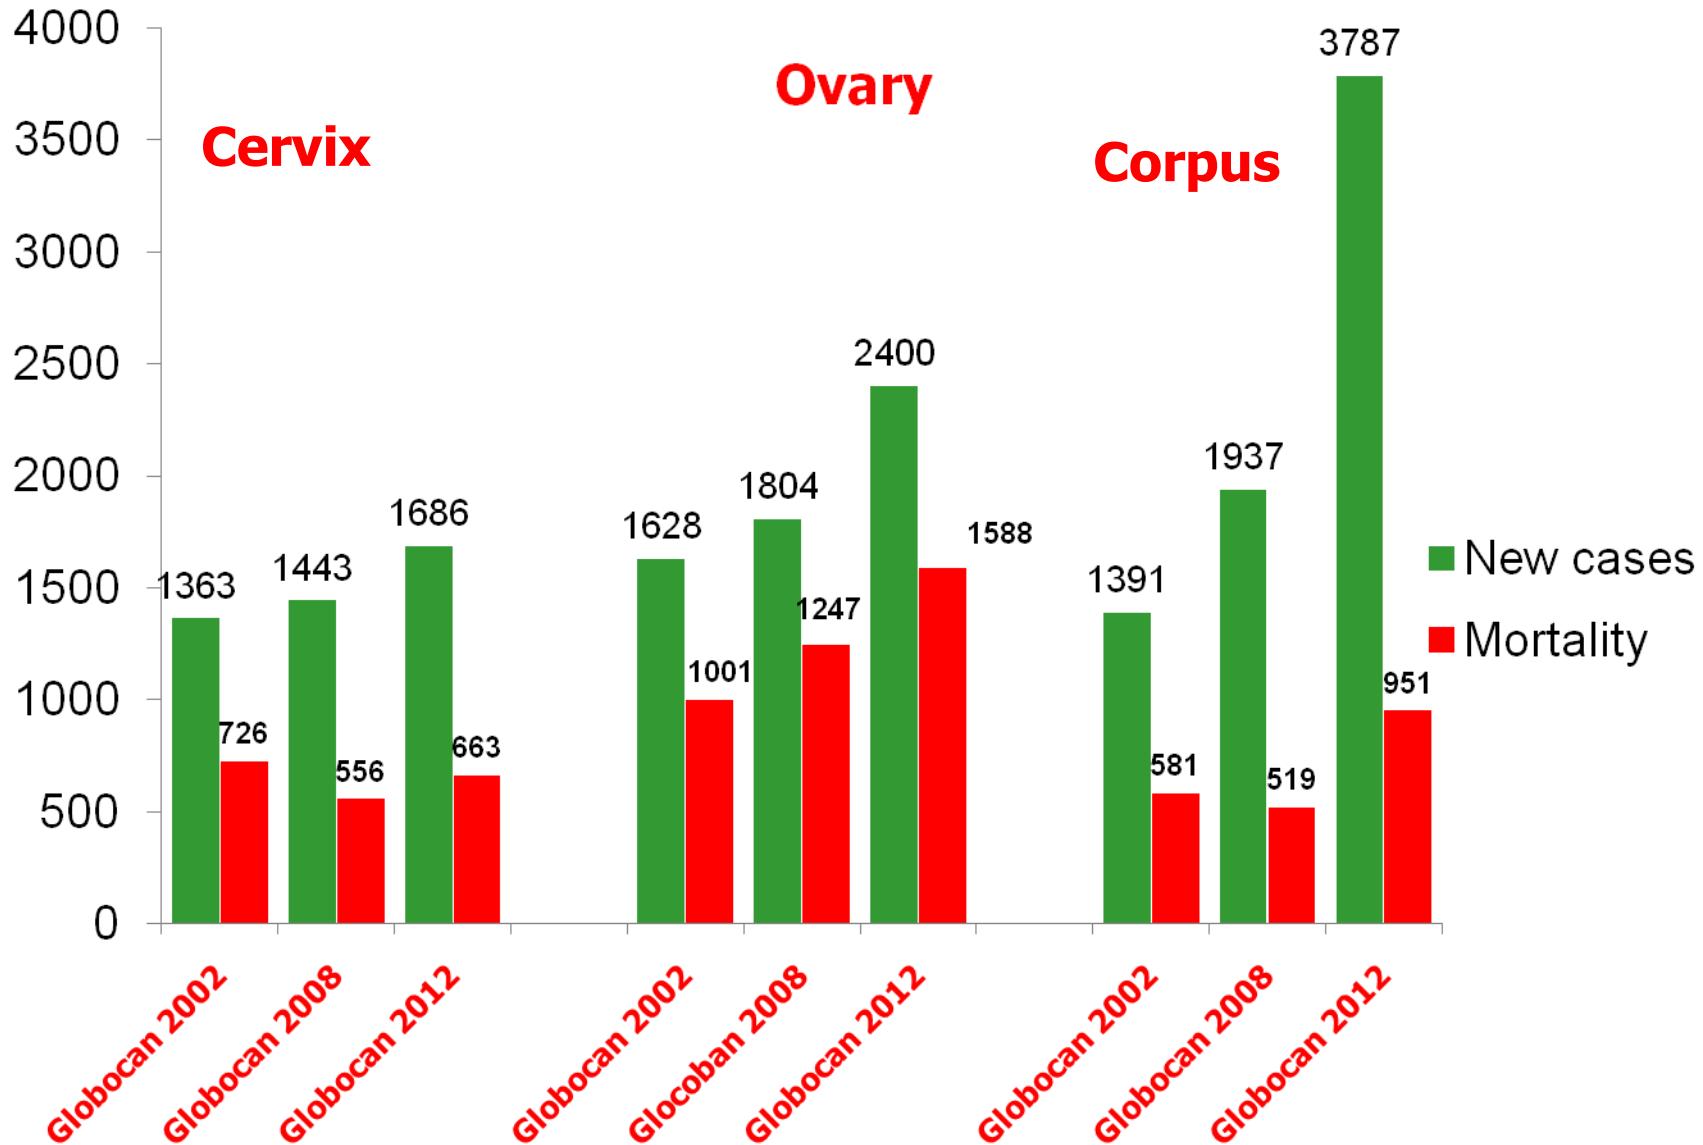

GYN CANCERS within years

The First 10 Women Cancers with in years (MoH)

New Cases vs Mortality in Turkey

Therapy depends on

- Age , performance
- Accurate diagnosis
- Dept of invasion,LVSI
- Fertility desire
- Stage
- Lenf Node status

Staging(2009)

Early stage

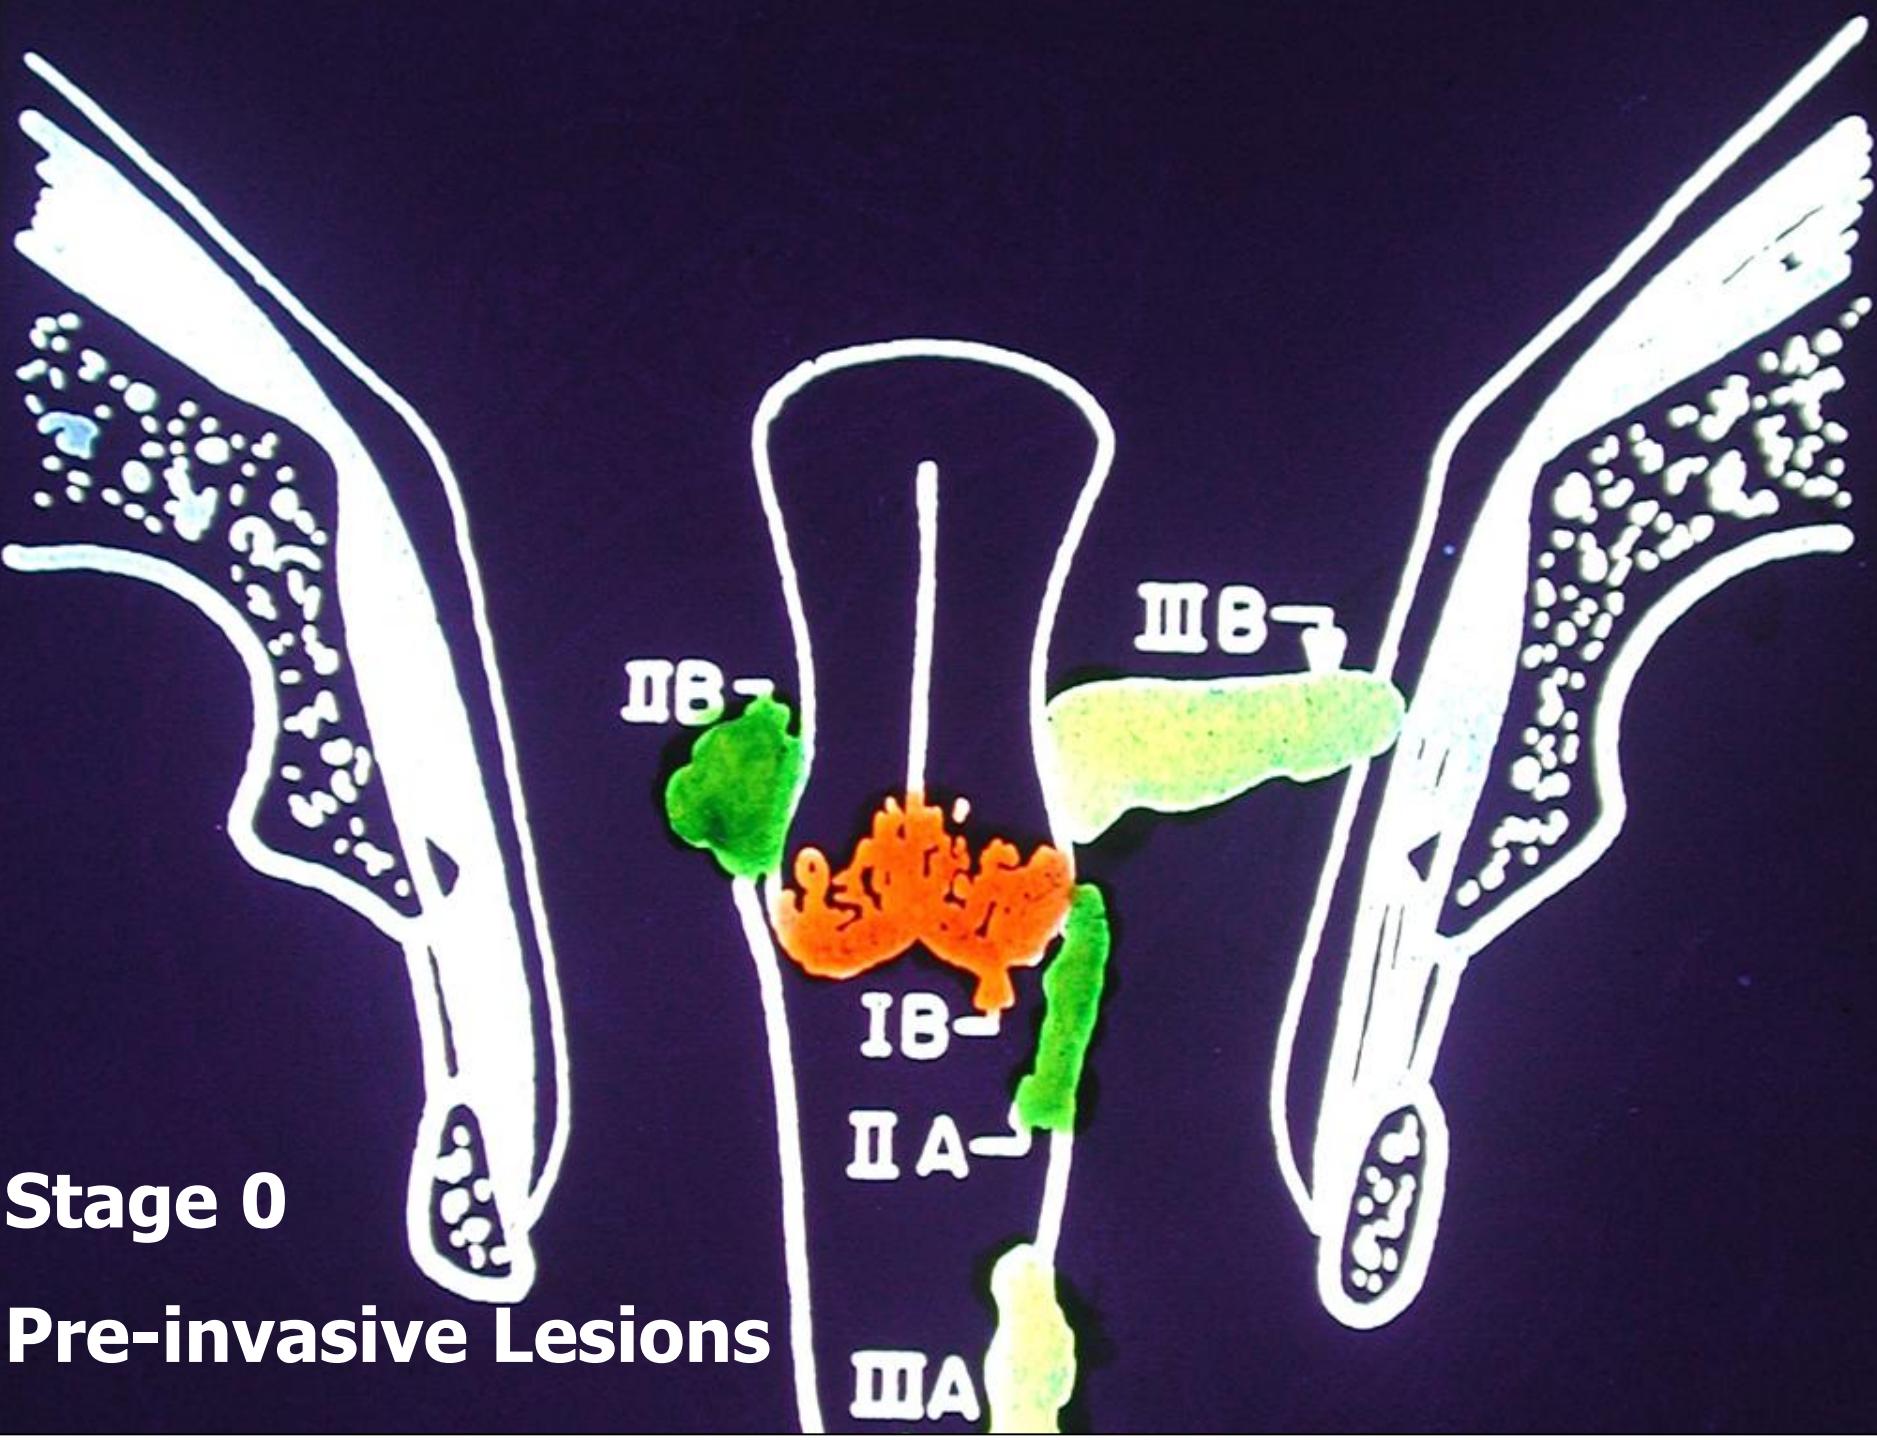

**Ia1, Ia2, Ib1
and IIa1**

Advanced stage

**Ib2, IIb2
And others**

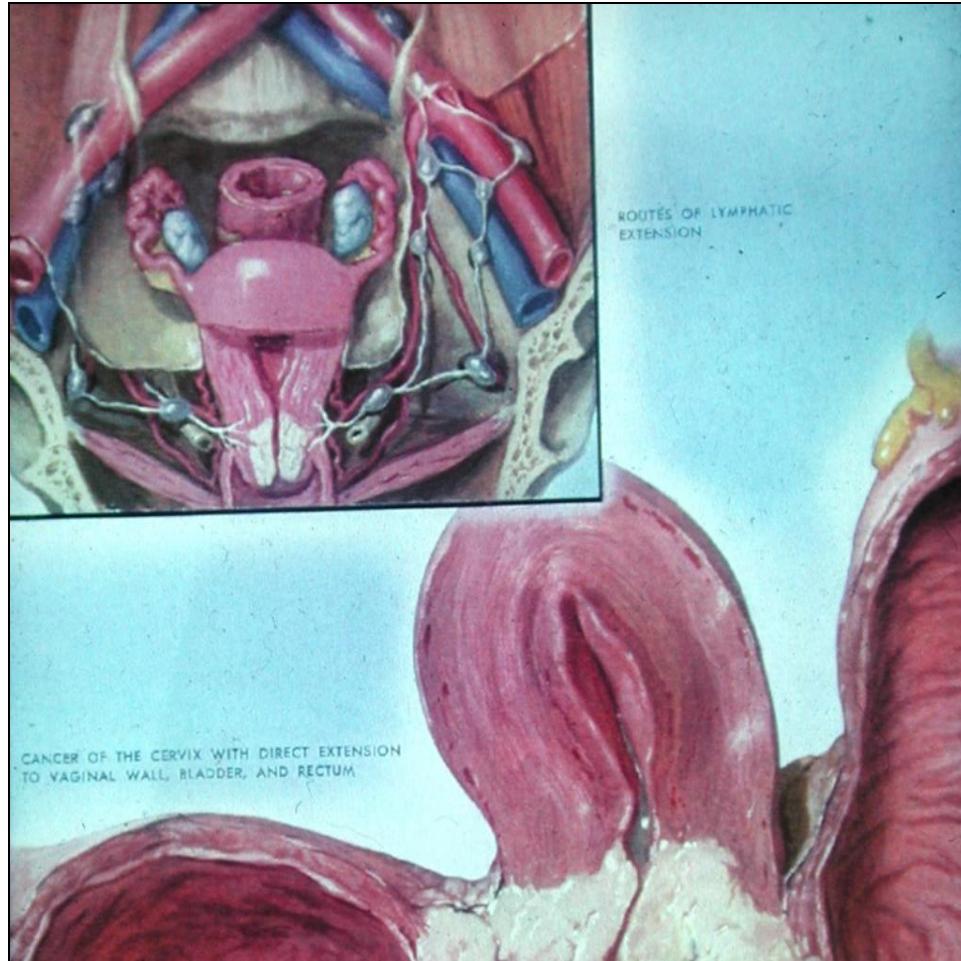

Stage 0

Pre-invasive Lesions

Treatment of Cervical Cancer

**Primary
Lesion**

**Potential
Metastatic
Fields**

Standard treatment of early stage cervical cancer

(Stage 1a-1b1-2a1)

Rad His
(Pivertype III, Querlue C2)

Radical Rad thrp
Brachy, Tele

Lymphadenectomy
(sentinel or systemic)

BSO ±
Ovary Transposition

Conventional(abd/vaj)
endoscopic(robotic,L/S)

**Same survival
Different Complications**

Radical hysterectomy classifications

- Piver et al (1974)
- Querleu-Morrow (2008)
- Cibula (2011)

Type A	Type I (Extrafascial)
Type B (B1-B2)	Type II (Mod RH)
Type C (C1-C2)	Type III (RH)
Type D (D1-D2)	Type IV (RH)
	Type V (RH)

Radical hyst/trachelectomy

Complete primary tumor control

But

**Parametrial resection related
Inf. Hipogastric plexus
(Sympathetic and Parasympathetic)**

- More complication
- Vascular
- Urologic
- GIS
- Sexual
- Loss of fertility

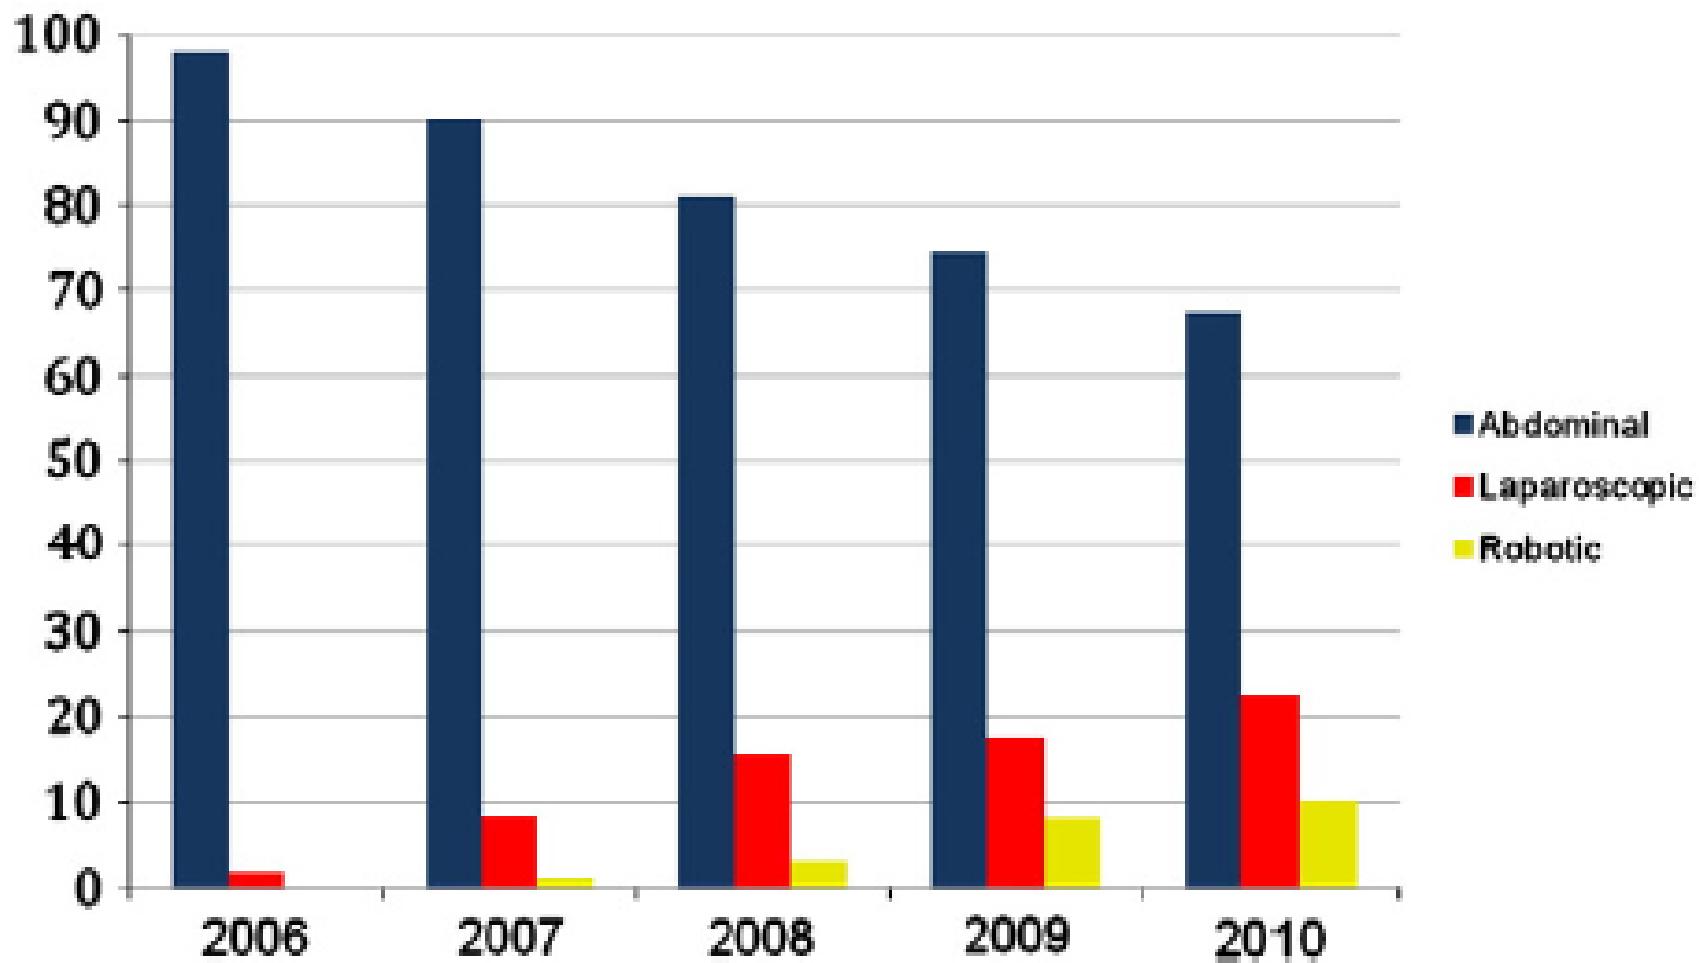

New Approaches

- Minimally invasive surgery
- Sentinel node not standartized
- Nerve sparing surgery – less postoperative ,vesical,rectal and sexual dysfunc
- Limitation of parametrial resection??
- Fertility sparing

Minimally invasive surgery

- Laparoscopic
 - Robotic
 - LESS
- (Long term oncologic outcomes ?)

Types of surgeries between the years 2006-2010

	Robotic	L/S	Open
Recc. (%)	3.79	5.58	6.72
Follow up (month)	21	34	58
LN number	26	21	21
Post-op inf/ non-inf morbidity (%)	3,8/7,8	6.5/18,3	18.2/19,4
Hospital stay	3	5,5	8,4
Blood need (%)	2	5	25

Sistemic review:

L/S RH (1339pts)

Open RH (1152pts)

Rob RH (327pts)

Recurrance rates are the same

Table 7: Descriptive statistics for recurrence percentage

RH MLIID	No.	Minimum (%)	Median (%)	Maximum (%)	Mean (%)	Std. Deviation (%)
Open RH	9	0		17.85	6.72	5.43
Laparoscopic RH	17	0	2.8	17.39	5.58	6.85
Robotic RH	11	0	0	14.28	3.79	5.59
Total	37	0	3.125	17.85	5.33	6.11

Descriptive statistics for follow-up in months

Type of RH	No.	Minimum	Median	Maximum	Mean	Std. deviation
Open RH	13	15.2	41	300	58.0	74.9
Laparoscopic RH	18	7.2	30	78	34.1	18.7
Robotic RH	10	9.0	19	36	21.1	11.2
Total	41	7.2	29	300	38.5	45.5

Endoscopic vs.conventional

- **Less intraop Bleeding**
- **Less hospital stay**
- **Early discharge**
- **Quality of life**
- **Low morbidity**(Magnification and technique advantage of endoscopic instruments)
- **Same dissected lymph node number**
- **Same recurrence and survival**

Lymphadenectomy

- Extend of tumor
- Prognosis
- Treatment (KT/RT/Komb)
- Adjuvant RT margins
- Direct therapeutic effect (Bulky LN)

Early and Late term Morbidity

Lymphedema

**Lymphocytic
Infection**

Lymphadenectomy

- Number of dissected nodes are similar (open-endoscopic) **Salicru S et al , Invasive Gynecol , 2011**
- Related to overall survival (**SEER 5522 women**) **Suprasert et al , Int J Gynecol Ostet, 2012**
- Dissection of bulky lymph nodes have therapeutic benefits . **Shah et al , Cancer , 2011**

Sentinel Node (lymphatic mapping)

- **Dual technique**
(Techn- 99,Isosulfan blue)
- **Sensitivity 98,2%**
- **Negative Predictive Value
99,6%**

Not Yet standardised

Low risk Group (1a2-1b1)

- **Tumor size**
 - $\leq 2\text{cm}$
- **Dept of invasion**
 - $\leq 10 \text{ mm}$
 - $\leq \%50$ stromal invasion
- **LVSI negative**
- **LN negative**

Parametrial involvement in Low risk Group

Author	n	Parametrium %
Kinney 95	83	0.0
Covens 02	536	0.6
Stegeman 07	103	0.0
Wright 08	270	0.4
Frumovitz 09	125	0.0

Conservative management of early stage cervical cancer. Is there a role for parametrial surgery? [Schmeler KM, Frumovitz M, Ramirez PT. Gynecol Oncol. 2011 Mar;120\(3\):321-5.](#)

Retrospective review of early stage adeno carcinoma

Stg	N	R.surg	Para mth	Lymph node	Rec
1a1	337	194/337	0/190	2/209	3/306
1a2	118	85/118	0/72	0/90	1/117
1b1	105	91/105	1/91	1/99	6/105

Surgical approaches in low risk group

FSS in ECC

- 40,1% of CC are <45yo (SEER data)
- 20,78% are <39yo (Cochrane- US and Europe)

Radical Trachelectomy
Open
Vaginal
Endoscopic

Indications of Trachelectomy

- Desire preserving fertility
- No fertility problems
- Ia1, Ia2
- Ib1
 - (<2cm, stromal invasion <50%,)
- Additional several variations (NACT..)
- Except neuroendocrine histology

Roy and Plante Am J Obstet Gynecol , 1998

Oncologic Outcome Trachelectomy vs. RH

No difference between groups

- Recurrance rate
- PFS,OS
- Morbidity

Meta analysis (587 participants)

Xu L, *Acta Obstet Gynecol Scand*, 2011

Diameter more than >2cm has a higher risk for oncologic outcome

A study with 618 pts

Rob L , *Lancett Oncol*, 2011

Obstetric Outcomes

- **10-13% are infertile**
- **VRT is more fertility saving than ART**
- **Misscarriage rate**
 - **1st trimester 20%**
 - **2nd trimester 3%**
- **73% of pregnancies reached 3rd trimester**
- **Of which 75% delivered at term**

IA

(Micro-invasive cancer)

Cervical Cancer

Primary Prevention

- Stop smoking
- Barrier Contraceptives
- Monogamy
- Diatery (Folic ,VitB,Caroten etc)
- Vaccination

Secondary Prevention

Screening

Conclusion-I

- **Conservative surgery in selected patients**
- **Fertility sparing surgery**
- **Nerve sparing surgery decreases the complications while increasing the quality of life**

Conclusion-II

- **Sentinel lymph node dissection is getting popular but is not standardized yet**
- **Parametrial resection should be limited in low risk early stage CC patients**
